A2595 14

BASIC PETROLEUM DATA BOOK

Petroleum Industry Statistics

Volume VII, Number 1
January 1987

American Petroleum Institute
1220 L Street, Northwest
Washington, D.C. 20005

The American Petroleum Institute, incorporated in 1919 under the laws of the District of Columbia, serves as a forum, information bureau, technical clearing house, and national trade association for the petroleum industry.

Beginning with Volume 1, Number 1, the Basic Petroleum Data Book will be updated three times a year. Each issue will be an independent newly-printed book which can be discarded when subsequent volumes are released. This format supersedes the original loose-leaf Data Book first printed in October 1975.

TABLE OF CONTENTS

SECTION I. ENERGY

SECTION II. CRUDE OIL RESERVES

SECTION III. EXPLORATION AND DRILLING

SECTION IV. PRODUCTION

SECTION V. FINANCIAL

SECTION VI. PRICES

SECTION VII. DEMAND

SECTION VIII. REFINING

SECTION IX. IMPORTS

SECTION X. EXPORTS

SECTION XI. OFFSHORE

SECTION XII. TRANSPORTATION

SECTION XIII. NATURAL GAS

SECTION XIV. OPEC

SECTION XV. MISCELLANEOUS

TABLE OF CONTENTS

SECTION I. ENERGY

Table 1. Market Economies Oil Consumption and Production, History and Projections
Table 2. Market Economies Energy Projections (Comparisons)
Table 3. U.S. Economic, Demographic & Energy Indicators
Table 4. Comparison of Midprice Energy Supply/Demand Projections for 1990
Table 5. Projections of U.S. Energy Demand by Sector for 1990
Table 6. U.S. Gross Energy Consumption by Sources
Table 7. U.S. Production of Energy by Source
Table 8. U.S. Gross Energy Consumption by Sector
Table 9. U.S. Energy Input Demand to Industrial Sector
Table 10. U.S. Energy Input Demand to Household and Commercial Sector
Table 11. U.S. Energy Input Demand to Transportation
Table 12. U.S. Energy Input Demand to Utilities
Table 13. World Primary Energy Production
Table 14. World Coal Production

SECTION II. CRUDE OIL RESERVES

Table 1. Proved World Reserves of Crude Oil
Table 2. The Reserves of United States Crude Oil
Table 3. U.S. Proved Crude Oil Reserves by State
Table 4. Proved Crude Reserves -- Twenty Leading Nations
Table 5. USGS Estimates of U.S. Oil and Gas Reserves

SECTION III. EXPLORATION AND DRILLING

Table 1. Exploratory Wells and Footage Drilled in U.S.
Table 2. Development & Total Wells and Footage Drilled in U.S.
Table 3. U.S. Wells Drilled by Depth Interval
Table 4. U.S. Petroleum Geophysical Exploration
Table 5. Free World Geophysical Exploration
Table 6. Historical Record: New Field Oil Discoveries Proved to be of Significant Size
Table 7. Historical Record: New Field Gas Discoveries Proved to be of Significant Size
Table 8. Historical Record: New Field Oil & Gas Discoveries Proved to be of Significant Size
Table 9. U.S. Estimated Drilling Costs--Onshore
Table 10. U.S. Estimated Drilling Costs--Offshore
Table 11. U.S. Estimated Drilling Costs--All Wells
Table 12. Free World Total Well Completions
Table 13. Free World Total Exploratory Well Completions
Table 14. U.S. Annual Average Rotary Rig Activity by State
Table 15. U.S. Total Wells Reported as Completed by State
Table 16. Annual U.S. Rotary Rig Census
Table 17. Producing Gas and Condensate Wells, by State
Table 18. Producing Oil Wells, by State
Table 19. Producing Oil Wells in U.S. By State and Type
Table 20. U.S. Stripper Wells By State
Table 21. U.S. Stripper Well Abandonments By State
Table 22. Producing Oil and Gas Wells, Free World

SECTION IV. PRODUCTION

Table 1. World Crude Oil Production by Area
Table 2. World Crude Production -- Twenty Leading Nations
Table 3. U.S. Stripper Wells and Production
Table 4. U.S. Crude Production by State
Table 5. U.S. Stripper Well Production by State
Table 6. Oil Volume, Value and Revenues Received from Onshore Federal and Indian Lands
Table 7. Twenty Leading Companies -- U.S. Crude Oil, Condensate and Natural Gas Liquids Production

SECTION V. FINANCIAL

Table 1. Average Hourly Earnings: Mining and Manufacturing vs. Oil and Gas Production and Refining
Table 2. Number of Employees: Oil and Gas Extraction and Refining
Table 3. Sources of Capital of a Group of Petroleum Companies
Table 4. Net Income as a Percent of Net Worth: Petroleum vs. Other Industries
Table 5. Domestic and Foreign Net Income of a Group of Petroleum Companies
Table 6. World Petroleum Industry Capital and Exploration Expenditures
Table 7. Sources and Uses of Working Capital of a Group of Petroleum Companies
Table 8. Domestic and Foreign Capital Expenditures of the World Petroleum Industry
Table 9. Estimated U.S. Exploration and Development Expenditures
Table 10. U.S. Estimated Expenditures for Exploration, Development and Production
Table 11. Environmental Protection Expenditures of the Petroleum Industry within the U.S.
Table 12. Summary Financial Data for Twenty-Four Leading U.S. Oil Companies
Table 13. Capital Expenditures of Twenty-Four Leading U.S. Oil Companies
Table 14. Net Income as a Percent of Stockholder's Equity--Oil and Non-Oil Companies
Table 15. Windfall Profits Tax
Table 16. U.S. Merchandise Trade Value
Table 17. Oil Finding and Development Costs

SECTION VI. PRICES

Table 1. Average Annual Wellhead Price of U.S. Crude
Table 2. Average Annual Wellhead Price of U.S. Natural Gas
Table 3. Refiner Acquisition Cost of Crude Oil
Table 4. Trend of Wholesale Prices of Commodities Used in Petroleum Production
Table 5. Trends of Regular Grade Gasoline Prices vs. Prices of Other Consumer Goods and Services
Table 6. U.S. Annual Average Retail Price for Number 2 Home Heating Oil
Table 7. Total Dollar Value of Crude Oil and Natural Gas at the Wellhead
Table 8. U.S. Average Wellhead Value Per Barrel of Crude by State
Table 9. U.S. Average Wellhead Value of Natural Gas by State
Table 10. Posted Prices of Key Foreign Crudes
Table 11. Official Government Selling Prices of Key Foreign Crudes
Table 12. Average U.S. Retail Gasoline Prices for Selected Cities
Table 13. Average Price of Natural Gas Consumed by End Use Sector

SECTION VII. DEMAND

Table 1. Estimated World Demand for Refined Petroleum Products by Area
Table 2. Total U.S. Supply and Demand for All Oils
Table 3. U.S. Supply and Demand for Total Gasoline
Table 4. Total U.S. Supply and Demand for Motor Gasoline
Table 5. Total U.S. Supply and Demand for Distillate Fuel Oil
Table 6. Total U.S. Supply and Demand for Residual Fuel Oil
Table 7. Sales of Distillate and Residual Fuel Oils to Electric Utilities
Table 8. Motor Gasoline Consumption in the U.S.
Table 9. U.S. Sales of Distillate Fuel Oil by State
Table 10. U.S. Sales of Distillate Fuel Oil by Uses
Table 11. U.S. Sales of Residual Fuel Oil by State
Table 12. U.S. Sales of Residual Fuel Oil by Uses
Table 13. Total U.S. Supply and Demand for Naphtha Type Jet Fuel
Table 14. Total U.S. Supply and Demand for Kerosine Type Jet Fuel
Table 15. Total U.S. Supply and Demand for Kerosine
Table 16. Total U.S. Supply and Demand for Natural Gas Liquids and Liquefied Refinery Gases
Table 17. Total U.S. Supply and Demand for Lubricants
Table 18. Total U.S. Supply and Demand for "Other Oils"
Table 19. U.S. Crude Oil Stocks
Table 20. Twenty Leading Companies -- Motor Gasoline Sales

SECTION VIII. REFINING

Table 1. Estimated Worldwide Crude Oil Refining Capacity by Area
Table 2. Worldwide Crude Oil Refinery Runs
Table 3. World Refinery Output by Area for Major Petroleum Products
Table 4. U.S. Crude Oil Refining Capacity
Table 5. Percentage Yields of Refined Petroleum Products from Crude Oil in the U.S.
Table 6. U.S. Crude Oil Refinery Runs by PAD District -- Foreign vs. Domestic
Table 7. Number and Capacity of U.S. Petroleum Refineries
Table 8. Operating Refineries Worldwide
Table 9. Nelson Refinery Operating Cost Indexes
Table 10. U.S. Refineries Shutdown Since January 1, 1981
Table 11. Twenty Leading Companies -- U.S. Refining Capacities
Table 12. U.S. Gas Processing Capacity and Average Production
Table 13. World Gas Processing Capacities and Average Production

SECTION IX. IMPORTS

Table 1. The Share of Imports in U.S. Domestic Petroleum Demand
Table 2. Total U.S. Imports of Petroleum and Petroleum Production
Table 3. U.S. Crude Oil Imports by Area
Table 4. U.S. Imports of Crude Petroleum by Country of Origin
Table 5. U.S. Imports of Crude Oil by P.A.D. Districts
Table 6. U.S. Imports of Distillate and Residual Fuel Oil by P.A.D. Districts
Table 7. U.S. Imports of Unfinished Oils and Refined Products by P.A.D. Districts
Table 8. Total U.S. Petroleum Imports by Source
Table 9. U.S. Direct Petroleum Imports from Members of OAPEC, September 1973-April 1974
Table 10. World Oil Movements

SECTION X. EXPORTS

Table 1. Total U.S. Domestic Production and Exports of Petroleum
Table 2. U.S. Exports of Petroleum to Selected Areas
Table 3. African Oil Exports to Selected Areas
Table 4. Middle East Oil Exports to Selected Areas
Table 5. The Role of Middle East and African Oil in Western European and Japanese Consumption
Table 6. The Role of Middle East and African Oil in World Exports

SECTION XI. OFFSHORE

Table 1. Estimated World Production of Crude Oil, Onshore vs. Offshore
Table 2. Estimated Worldwide Offshore Production of Crude Oil by Areas
Table 3. Production and Value of U.S. Crude Oil and Condensate, Onshore--Offshore
Table 4. Estimated Worldwide Production of Natural Gas, Onshore vs. Offshore
Table 5. Estimated Worldwide Offshore Production of Natural Gas by Areas
Table 6. Production and Value of U.S. Natural Gas, Onshore--Offshore
Table 7. Total Offshore Wells Drilled in the U.S., Federal and State Leases
Table 8. Accumulated Production State and Federal Offshore Leases
Table 9. U.S. Outer Continental Shelf Oil and Gas Lease Sales
Table 10. U.S. Outer Continental Shelf Revenue and Production Value
Table 11. U.S. Outer Continental Shelf Oil and Gas Sales, Total Bonus vs. Total Amount of All Bids Received
Table 12. United States Offshore Platforms and Other Structures
Table 13. Worldwide Water Depth Records
Table 14. Eight-Year OCS Blowout Experience
Table 15. Oil Spill Incidents of 50 or More Barrels
Table 16. Historical Data on Leasing Continental Seabeds Adjacent to the U.S.
Table 17. Basin Ranking
Table 18. U.S. Offshore Crude Oil Production by State
Table 19. U.S. Offshore Dry Natural Gas Production by State

SECTION XII. TRANSPORTATION

Table 1. U.S. Gas Utility Industry Miles of Pipeline by Type
Table 2. Total Crude Oil and Petroleum Products Transported in U.S. by Method of Transportation
Table 3. U.S. Tank Ship Fleet
Table 4. World Tank Fleet
Table 5. Age Distribution of World Tanker Fleet by Major Flag of Registry
Table 6. Spills of Oil and Other Substances
Table 7. Total and Average Consumption of Motor Fuel by U.S. Motor Vehicles
Table 8. Total and Average Travel of U.S. Motor Vehicles
Table 9. U.S. Car Sales by Market-Class Comparisons
Table 10. Mileage and Deliveries for U.S. Liquid Pipelines
Table 11. Mileage and Compressor Stations for U.S. Natural Gas Pipelines

SECTION XIII. NATURAL GAS

Table 1. Estimated Proved World Reserves of Natural Gas
Table 2. The Supply of U.S. Natural Gas
Table 3. The Reserves of U.S. Natural Gas Liquids
Table 4. World Marketed Production of Natural Gas by Areas
Table 5. Salient Statistics of Natural Gas in the U.S.
Table 6. U.S. Imports of Natural Gas by Source
Table 7. Estimated Natural Gas Reserves--Twenty Leading Nations
Table 8. World Natural Gas Production--Twenty Leading Nations
Table 9. U.S. Marketed Production of Natural Gas by State
Table 10. U.S. Consumption of Natural Gas by State
Table 11. U.S. Proved Reserves of Natural Gas by State
Table 12. Twenty Leading Companies -- U.S. Natural Gas Production

SECTION XIV. OPEC

Table 1. OPEC Crude Oil Reserves
Table 2. OPEC Crude Oil Production
Table 3. U.S. Total Petroleum Imports from OPEC Nations
Table 4. U.S. Crude Oil Imports from OPEC Nations
Table 5. OPEC Refinery Capacity
Table 6. OPEC Revenues from Oil
Table 7. OPEC Marketed Production of Natural Gas

SECTION XV. MISCELLANEOUS

Table 1. Estimated Average No. of Employees in Important Segments of the Petroleum Industry
Table 2. U.S. Service Station Population by State
Table 3. Conversion Table
Table 4. Heat Values for Various Energy Products
Table 5. U.S. Petroleum Industry Injury Frequency Rates by Industry Sector
Table 6. U.S. Acreage Under Lease for Oil and Gas Production
Table 7. Selected Definitions
Table 8. Map -- Petroleum Administration for Defense (PAD) Districts

BASIC PETROLEUM DATA BOOK

SECTION I. ENERGY

Table 1. Market Economies Oil Consumption and Production, History and Projections

Table 2. Comparisons of Energy Projections for the Market Economies

Table 3. Selected United States Economic, Demographic, and Energy Indicators

Table 4. Comparison of U.S. Base Case Energy Supply/Demand Projections for 1990

Table 5. Projections of U.S. Energy Demand by Sector for 1990

Table 6. United States Total Gross Consumption of Energy Resources by Major Sources

Table 7. United States Total Production of Energy Resources by Major Sources

Table 8. Total U.S. Gross Energy Consumption by Consuming Sector

Table 9. United States Demand for Energy Inputs to the Industrial Sector

Table 10. United States Demand for Energy Inputs to the Household and Commercial Sector

Table 11. United States Demand for Energy Inputs in the Transportation Sector

Table 12. United States Demand for Energy Inputs for Electricity Generation by Utilities

Table 13. World Primary Energy Production

Table 14. World Coal Production

MARKET ECONOMIES OIL CONSUMPTION AND PRODUCTION,(1)
HISTORY AND PROJECTIONS, U.S. BASE CASE
(Million Barrels per Day)

Supply and Disposition	1980	1981	1982	1983	1984	1985	1986	1987	1988	1989	1990	1995
Consumption

Transportation	18.6	18.6	19.4	19.5	NA
Total	60.3	58.7	59.1	59.7	NA

NA=Not Available

(1) End-use consumption forecasts are not available.

(2) Total available supply is defined to include domestic production plus net imports, stock changes, and other adjustments.

(3) Does not include utility generation and transmission of electricity, refinery and pipeline fuels, and SPR additions. Lease and plant fuel is included under industrial consumption.

---

(1) Gross energy is that contained in all types of commercial energy at the time it is incorporated in the economy, whether the energy is produced domestically or imported. Gross energy comprises inputs of primary fuels (or their derivatives) and outputs of hydropower and nuclear power converted to theoretical energy inputs. Gross energy includes the energy used for the production, processing, and transportation of energy power.

(2) Includes anthracite, bituminous, lignite coal, and imported coke.

(3) Petroleum products including still gas, liquefied refinery gas, and natural gas liquids.

(4) Output of hydropower (adjusted for net imports or net exports) and nuclear power converted to theoretical energy inputs calculated from national average heat rates for fossil-fueled steam-electric plants provided by the Federal Power Commission.

---

(1) Includes anthracite, bituminous, and lignite coals

(2) Includes bunkers and military transportation

(3) Utility electricity, generated and imported, distributed on basis of historical series in the Edison Electric Institute Yearbook. Conversion of electricity to energy equivalent was made at the value of contained energy corresponding to 100-percent efficiency using a theoretical rate of 3,412 Btu per kilowatt-hour.

(1) F_{95} denotes the 95th fractile; the probability of more than the amount F_{95} is 95% F_5 is defined similarly.
(2) Includes quantities considered recoverable only if technology permits their exploitation beneath Artic pack ice--a condition not yet met.
(3) Does not include gas in storage.

---

(1) Prior to 1970, well data shown are for wells reported to the API for that year. Because the time span between the time wells were actually completed and when they were reported to the API began to grow significantly, the date of publication began to seriously lag the actual well-completion date. Hence, beginning in 1970, the statistics show the year in which the wells were completed regardless of the time frame in which they were reported to API.

---

(1) The number of development wells for 1961-1965 was obtained by deducting the total number of exploratory wells reported by the AAPG from the total number of wells reported by the Oil and Gas Journal.

(2) Footage not available prior to 1966.

(3) Prior to 1970, well data shown are for wells reported to the API for that year. Because the time span between the time wells were actually completed and when they were reported to the API began to grow significantly, the date of publication began to seriously lag the actual well-completion date. Hence, beginning in 1970, the statistics show the year in which the wells were completed regardless of the time frame in which they were reported to API.

---

* Included in state total.

(1) Includes service wells, stratigraphic and core tests.

(2) Northern Gulf of Mexico was a new area designated in 1972 by the Bureau of Land Management for federally controlled Outer Continental Shelf Waters not previously mapped or leased.

(3) Prior to 1970, well data shown are for wells reported to the API for that year. Because the time span between the time wells were actually completed and when they were reported to the API began to grow significantly, the date of publication began to seriously lag the actual well-completion date. Hence, beginning in 1970, the statistics show the year in which the wells were completed, regardless of the time frame in which they were reported to API.

(1) Long Beach, California owns several oil fields and a large percentage of the oil produced from these fields. It has contracts with Arco, Exxon, Mobil, Shell, Texaco, Unocal and others to develop the properties. Because the oil owned by Long Beach is not included in the contracted companies' net production figures, the city has been included as a separate incorporated municipality.

---

(1) Texaco acquired Getty Oil Company on March 1, 1984. Texaco's figure includes 100% of Getty's estimated annualized production.

(2) Standard Oil of California acquired the Gulf Corporation on June 15, 1984, and on July 1, 1984 Standard changed its name to Chevron. Chevron's figure includes Gulf's 1984 full-year production.

(3) Mobil acquired Superior on September 28, 1984. Mobil's figure includes 100% of Superior's estimated annualized production.

(4) Phillips acquired Aminoil from R.J. Reynolds on October 26, 1984. Phillips' figure includes 100% of Aminoil's estimated annualized production.

(5) U.S. Steel acquired the U.S. assets of Husky Oil Ltd. on May 31, 1984. U.S. Steel's figure includes 100% of Husky's estimated annualized production of its U.S. assets.

(6) Long Beach, California owns several oil fields and a large percentage of the oil produced from these fields. It has contracts with Arco, Exxon, Mobil, Shell, Texaco, Unocal and others to develop the properties. Because the oil owned by Long Beach is not included in the contracted companies' net production figures, the city has been included as a separate incorporated municipality.

NET INCOME AS A PERCENT OF STOCKHOLDERS' EQUITY
OIL AND NON-OIL COMPANIES

Year	API-24 Companies(1)	Non-Petroleum Manufacturing(2)
1968	12.5	14.7
1969	11.3	13.8
1970	10.9	10.3
1971	10.4	11.3
1972	9.8	13.0
1973	15.0	15.5
1974	18.6	13.9
1975	12.8	12.3
1976	14.0	15.1
1977	13.4	15.0
1978	13.7	15.6
1979	20.9	16.4
1980	22.8	12.9
1981	18.8	13.7
1982	13.1	9.8
1983	12.4	12.2
1984	11.1	15.0
Median	13.1	13.8

---

(1) Net income as a percent of average stockholders' equity.

(2) Net income as a percent of average stockholders' equity. Calculations based on Standard & Poor's Compustat data base, All Industrial Aggregate excluding non-manufacturing (e.g., retail) and petroleum industry sectors. The median number of non-oil comopanies over the period was 747; the range was 694-820.

---

(1) Regular grade gasoline--leaded and unleaded.

(2) Area is generally the SMSA. Los Angeles, Long Beach, Anaheim is a combination of two SMSA's and N.Y.-NE N.J. and Chicago-NW Ind. are the more extensive Standard Consolidated Areas.

(3) Regions are defined as the four Census Regions.

---

(1) Includes benzol, other hydrocarbons, and hydrogen

(2) Represents the difference between supply and indicated demand for crude petroleum, first reported separately in 1968, prior years include adjustments where available

(3) Beginning with 1960, processing gains are reported separately; prior years include adjustments to permit a balance between total new supply and total supply

(4) Separate data not available prior to 1968

(5) Data for this year and those for subsequent years are on a 50-state basis

---

(1) Includes benzol, other hydrocarbons, and hydrogen
(2) Represents the difference between supply and indicated demand for crude petroleum, first reported separately in 1968, prior years include adjustments where available
(3) Beginning with 1960, processing gains are reported separately; prior years include adjustments to permit a balance between total new supply and total supply
(4) Figures do not add due to independent rounding
(5) Excludes oil imported to the strategic petroleum reservve
(6) Included with crude oil. Separate figure is not available.

---

* Includes motor and aviation gasoline.

(3) U.S. Bureau of Mines altered its stock reporting base as of January 1975. On the new basis, year-end 1974 stocks were 228,262 thousand barrels.

(4) U.S. Department of Energy altered its stock reporting base as of January 1981. On the new basis, year-end 1980 stocks were 265,802 thousand barrels. This figure was used to compute the 1981 stock change.

(5) Includes blending components.

(6) Totals may not add due to independent rounding.

---

(1) Data prior to 1964 is not available on a comparable basis.

(2) U.S. Bureau of Mines altered its stock reporting as of January 1975. On the new basis, year-end 1974 stocks were 224,719 thousand barrels. This figure was used to compute the 1975 stock change.

(3) Totals do not add due to independent rounding.

(4) In 1981, the Department of Energy changed their methodology for calculating motor gasoline, distillate, and residual product supplies. Based on this new methodology, API has reconstructed DOE data for 1978, 1979 and 1980. The stock reporting base was also altered as of January 1981. On the new basis, year-end 1980 stocks were 263,003 thousand barrels. This figure was used to compute the 1981 stock change.

(5) Includes motor gasoline blending components.

(1) In 1981, the Department of Energy changed their methodology for calculating motor gasoline, distillate, and residual product supplied. Based on this new methodology, API has reconstructed DOE data for 1978, 1979 and 1980.

(2) Totals may not add due to independent rounding.

(3) In 1983, DOE changed their methodology for calculating stocks. The 1983 stock change is based on DOE's revised stock figures for 1982.

---

(1) In 1981, the Department of Energy changed their methodology for calculating motor gasoline, distillate and residual product supplied. Based on this new methodology, API has reconstructed DOE data for 1978, 1979 and 1980.

(2) In 1983, the Department of Energy changed their methodology for calculating stocks. The 1983 stock change is based on DOE's revised figure for 1982.

(3) Totals may not add due to independent rounding.

---

(1) These data include Alaska but not Hawaii.

(2) These data and those for subsequent years are on a 50-state basis.

(3) Electric public utility power plants only.

(4) These data and those for subsequent years include distillate sales for gas turbine plants.

(5) Includes kerosine jet fuel; 1972--24,000 bbls. per day; 1973--17,000 bbls. per day; 1974--14,000 bbls. per day; 1975--9,000 bbls. per day; 1976--11,600 bbls. per day; 1977--17,419 bbls. per day; 1978--12,342 bbls. per day.

---

(5) Includes range oil
(6) Excludes oil company use
(7) Includes kerosine-type jet fuel: 1976 -- 11,600 bbls. per day; 1977 -- 18,770 bbls. per day; 1978 -- 12,342 bbls. per day.
(8) Includes imports by military
(9) Beginning in 1979, heating oils is no longer a separate category. The figure is derived by adding residential, commercial and farming.

---

(1) Beginning with 1967, represented use by electric public-utility plants only.
(2) Includes imports by military.
(3) Beginning in 1979, heating oil has been reclassified commercial and is a part of the total called "heating and industrial."

(1) The U.S. Department of Energy altered its stock reporting base as of January 1981. On the new basis, year-end 1980 stocks were 146,145 thousand barrels. This figure was used to compute the 1981 stock change.

(2) Total demand excludes volume used as refinery inputs.

(3) Totals may not add due to independent rounding.

(1) Sales data represent net taxable gasoline gallonage sold in the U.S. by all petroleum marketers, including non-retail sales by suppliers, cooperatives, etc.
(2) Includes sales of subsidiaries BP Oil and Boron.
(3) Includes sales under the brand names of Douglas, Kayo and Onco.
(4) Includes sales of subsidiary Northwestern Refining Company.
(5) Includes all sales by Skelly Oil Company.
(6) Includes sales under the brand name Triangle.
(7) Unocal Corporation is the parent of Union Oil Company of California.
(8) Includes Cities Service. Southland acquired the refining, marketing and transportation sections of Citgo Petroleum Corp., a subsidiary of Occidental, on September 1, 1983.
(9) Diamond Shamrock acquired Sigmor in September 1983.
(10) Standard Oil of California acquired the Gulf Corporation on June 15, 1984 and on July 1, 1984, Standard changed its name to Chevron. Chevron's figure reflects this acquisition.
(11) Texaco acquired Getty Oil Company on March 1, 1984. Texaco's figures reflects this acquisition.

NOTE: Revenue = charges and/or collection--bonuses and first year rentals adjusted from book transfer dates (years) to Geological Survey from Bureau of Land Management, to actual sales dates. Distribution of escrow funds totaling $39,316,545 to the State of Louisiana and Lessees, pursuant to Supreme Court decree dated December 31, 1965, was not deducted from calendar year 1966 revenue charges, nor was the production value of $157 million deducted. 1970 bonuses increased $951,875 and rentals increased $22,500--leases on appeal validated.

* This column shows estimated seepage from the Santa Barbara blowout of January 28, 1969. Seepage in the 10 days following the blowout has been variously estimated at 10,000 to 71,500 barrels, but totals above do not include the first 10 days. The figure for 1972 includes seepage between February 7, 1969 and December 31,1972.

HISTORICAL DATA ON LEASING
CONTINENTAL SEABEDS ADJACENT TO THE UNITED STATES
(THOUSANDS OF SQUARE STATUTE MILES)

Region	State Lands(1)	OCS "Shelf" (Between State Limit and 200 Meter Depth)	Continental Slope (Between 200 and 2500 Meter Depths)	Total OCS
Hawaii	--	0.4(2)	3.6	4.0
Alaska	22.9	560.0	212.2	795.1
Pacific Coast States	4.5	15.0	76.2	95.7
Gulf Coast States	13.5	121.0	84.2	218.7
Atlantic Coast States	7.1	129.1	102.5	238.7
Total	48.0	825.5 559,040,000 Ac.	478.7 306,368,000 Ac.	1,352.2 865,408,000 Ac.

		Percent of OCS "Shelf"	Percent of Total OCS
TOTAL FEDERAL OCS ACREAGE EVER OFFERED FOR LEASE THROUGH 8/22/84	329,472,769	58.9	38.1
TOTAL FEDERAL OCS LEASED THROUGH 8/22/84	37,147,323	6.6	4.3
TOTAL FEDERAL OCS CURRENTLY UNDER LEASE 12/31/83(3)	18,500,000	3.3	2.1

---

(1) Areas within three nautical miles of coastline, except for Texas and Gulf Coast of Florida where the boundaries are three leagues (nine nautical miles) distant.

(2) Includes state areas.

(3) Approximate acreage figure is used because of constant company relinquishments of leases--approximately 200 leases relinquished each year.

N.A. Not Available

(1) Estimated.

(2) All native gas in storage reservoirs formerly classified as proved reserves of natural gas is included in this figure.

* Excludes gas loss due to natural gas liquids recovery.

(3) Figures include 26 trillion cubic feet in Prudhoe Bay, Alaska, (discovered in 1968).

(4) The net difference between gas stored in and gas withdrawn from underground storage reservoirs, inclusive of adjustments and native gas transferred from other reserve categories. (Adjustments include change of reporting basis starting in 1973 to report only gas reserves considered recoverable, in effect, reducing gas reserves by 1,024,140 MMCF that would have been reported since 1972 using former basis).

---

(1) Includes approximately 1 billion cubic feet of liquefied natural gas in 1970, 2 billion cubic feet in 1971, 0.2 billion cubic feet in 1972, 0.7 billion cubic feet in 1973, and 0.6 billion cubic feet in 1981.

(2) Less than one-half unit.

(3) Liquefied natural gas.

El Paso	107,000
U.S. TOTAL	17,231,000

---

(1) Reported on a "dry" gas basis unless otherwise noted.

(2) Sales. Texaco's figure also includes 100% of Getty Oil Company's estimated annualized production. (Texaco acquired Getty on March 1, 1984.)

(3) Standard Oil of California acquired the Gulf Corporation on June 15, 1984, and on July 1, 1984, Standard changed its name to Chevron. Chevron's figure includes 100% of Gulf's annualized production before the extraction of natural gas liquids.

(4) Mobil acquired Superior on September 23, 1984. Mobil's figure includes 100% of Superior's estimated annualized production.

(5) Phillips acquired Aminoil from R.J. Reynolds on October 26, 1984. Phillips' figure includes 100% of Aminoil's estimated annualized production.

(6) Volume before extraction of natural gas liquids.

(7) U.S. Steel acquired the U.S. assets of Husky Oil Ltd. on May 31, 1984. U.S. Steel's figure includes 100% of Husky's estimated annualized production of its U.S. assets.

(8) Includes synthetic gas and liquified petroleum gas.

---

(1) Original member 1960.
(2) Saudi Arabia and Kuwait share the production from the Neutral Zone on a 50-50 basis.
(3) Joined in 1961.
(4) Joined in 1962.
(5) Abu Dhabi joined in 1967. Figures reflect only Abu Dhabi reserves until 1974 when membership was transferred to the United Arab Emirates which includes Dubai and Sharjah.
(6) Joined in 1969.
(7) Joined in 1971.
(8) Joined in 1973.
(9) Joined as an associate member in 1973 and became a full member in 1975.
(10) Government estimate

---

(1) Original member 1960.
(2) Saudi Arabia and Kuwait share the production from the Neutral Zone on a 50-50 basis.
(3) Joined in 1961.
(4) Joined in 1962.
(5) Abu Dhabi joined in 1967. Figures reflect only Abu Dhabi production until 1974 when membership was transferred to the United Arab Emirates which includes Dubai and Sharjah.
(6) Joined in 1969.
(7) Joined in 1971.
(8) Joined in 1973.
(9) Joined as an associate member in 1973 and became a full member in 1975.

Source: IPAA--The Oil Producing Industry in Your State, Annuals.

SELECTED DEFINITIONS

BARREL--unit of volumetric measure. One barrel equals 42 U.S. gallons.

CRUDE OIL--technically defined as a mixture of hydrocarbons that exists in the liquid phase in natural underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities.

CRUDE OIL, PRODUCTION--the volume of liquids statistically defined as crude oil, which is produced from oil reservoirs during given periods of time. The amount of such production for a given period is generally established by measurement of volumes delivered from lease storage tanks (i.e., the point of custody transfer) to pipelines, trucks, or other media for transport to refineries or terminals with adjustments for (1) net differences between opening and closing lease inventories, and (2) basic sediment and water (BS&W).

CRUDE OIL, PROVED RESERVES--Proved reserves of crude oil as of December 31 of any given year are the estimated quantities of all liquids statistically defined as crude oil, which geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions.

Reservoirs are considered proved if economic producibility is supported by either actual production or conclusive formation tests. The area of an oil reservoir considered proved includes: (1) that portion delineated by drilling and defined by gas-oil or oil-water contacts, if any; and (2) the immediately adjoining portions not yet drilled but which can be reasonably judged as economically productive on the basis of available geological and engineering data. In the absence of information on fluid contacts, the lowest known structural occurence of hydrocarbons controls the lower proved limit of the reservoir.

Reserves of crude oil which can be produced economically through application of improved recovery techniques (such as fluid injection) are included in the "proved" classification.

Estimates of proved crude oil reserves do not include the following: (1) oil that may become available from known reservoirs but is reported separately as "indicated additional reserves"; (2) natural gas liquids (including lease condensate); (3) oil the recovery of which is subject to reasonable doubt because of uncertainty as to geology, reservoir characteristics, or economic factors; (4) oil that may occur in untested prospects; and (5) oil that may be recovered from oil shales, coal, gilsonite, and other such sources.

DEVELOPMENT WELL—In general, a well drilled within the proved area of an oil or gas reservoir to the depth of a stratigraphic horizon known to be productive.

DISTILLATE FUEL OIL--A general classification for one or more distilled petroleum fractions used for domestic heating and industrial burners, or for power generation in compression-ignition engines. These fractions are No. 1 Fuel Oil, No. 2 Fuel Oil, Diesel Fuel and No. 4 Fuel Oil.

DRY HOLE--An exploratory or development well found to be incapable of producing either oil or gas in sufficient quantities to justify completion as an oil or gas well.

EXPLORATORY WELL--A well drilled (1) to find and produce oil or gas in an unproved area; (2) to find a new reservoir in a field previously found to be productive of oil or gas in another reservoir; or (3) to extend the limits of a known oil or gas reservoir.

GAS WELL--A well completed for production of natural gas from one or more gas zones or reservoirs. Such wells contain no completions for the production of crude oil.

KEROSINE--A refined petroleum distillate conforming to the requirements of ASTM D 3699. Two classifications are No. 1-K and No.2-K.

KEROSINE-TYPE JET FUEL (Jet A)--A quality kerosine product covered by ASTM Spec. D 1655. Used primarily as fuel for commercial turbojet and turboprop aircraft engines. A relatively low freezing point distillate of the kerosine type.

LIQUEFIED REFINERY GAS (LRG)—Includes liquefied refinery gases that were fractionated from refinery or still gases. Through compression and/or refrigeration they are retained in the liquid state and represent final products. Excludes still gases used for chemical or rubber manufacture which are reported as petrochemical feedstocks and also excludes liquefied gases ready for blending into gasoline which are reported as gasoline blending components. Liquefied refinery gases are reported in the following categories for use as petrochemical feedstock, for other uses or both: ethane and/or ethylene, propane and/or propylene, butane and/or butylene, butane-propane mixtures, and isobutane.

LUBRICATING OILS--Includes all grades of paraffinic and naphthenic lubricating oil stocks, from light distillate spindle oils to residual cylinder stocks. Oils used in grease-making are also classified as lubricating oils.

MOTOR GASOLINE--A complex mixture of relatively volatile hydrocarbons, with or without small quantities of additives, obtained by blending appropriate refinery streams to form a fuel suitable for use in spark ignition engines. Includes all refinery products within the gasoline range (ASTM Spec. D 439) that are to be marketed as motor gasoline without further processing, i.e., any refinery operation except mechanical blending. Includes both leaded and unleaded grades. Also includes finished components in the gasoline range which will be used for blending or compounding into finished gasoline.

SELECTED DEFINITIONS

NAPHTHA-TYPE JET FUEL--(Jet B) A fuel in the heavy naphtha boiling range covered by ASTM Spec. D 1655 and meeting military Spec. MIL-T-5624 (JP-4). Used for turbojet and turboprop aircraft engines, primarily by the military. Excludes ramjet and petroleum rocket fuels.

NATURAL GAS--A mixture of hydrocarbon compounds and small quantities of various non-hydrocarbons existing in the gaseous phase or in solution with oil in natural underground reservoirs at reservoir conditions. Natural gas may be subclassified as follows: Associated Gas, Dissolved Gas, and Non-associated Gas.

NATURAL GAS, PRODUCTION--Statistics pertaining to natural gas production represent volumes of gas produced from natural oil and gas reservoirs during given periods of time with adjustments (where applicable) to reflect (1) the volume of gas returned to natural reservoirs, and (2) the reduction of volume resulting from the removal of natural gas liquids and nonhydrocarbon gases. The volume of natural gas withdrawn from underground storage facilities is not included in natural gas production statistics.

NATURAL GAS, PROVED RESERVES--Proved reserves of natural gas as of December 31 of any given year are the estimated quantities of natural gas which geological and engineering data demonstrate with reasonable certainty to be recoverable in the future from known natural oil and gas reservoirs under existing economic and operating conditions.

Reservoirs are considered proved if economic producibility is supported by either actual production or conclusive formation tests. The area of a reservoir considered proved includes: (1) that portion delineated by drilling and defined by gas-oil, gas-water or oil-water contacts; and (2) the adjoining portions not yet drilled but which can be reasonably judged as economically productive on the basis of available geological and engineering data. In the absence of information on fluid contacts, the lowest known structural occurrence of hydrocarbons controls the lower proved limit of the reservoir.

Reserve estimates are prepared for total recoverable natural gas, nonassociated gas, and associated-dissolved gas. Estimates do not include (1) gaseous equivalents of natural gas liquids expected to be recovered from reservoir natural gas as it is produced; (2) natural gas being held in underground storage; or (3) nonhydrocarbon gases.

NATURAL GAS LIQUIDS--Those portions of reservoir gas which are liquefied at the surface in lease separators, field facilities, or gas processing plants. Natural gas liquids include but are not limited to: ethane, propane, butanes, pentanes, natural gasoline, and condensate.

NEW-FIELD WILDCAT--A well located on a structural feature or other type of trap which has not previously produced oil or gas.

OFFSHORE--Term defined as that geographic area which lies seaward of the coastline. In general, the term "coastline" means the line of ordinary low water along that portion of the coast which is in direct contact with the open sea or the line marking seaward limit of inland water.

OFFSHORE WELL--A well which is bottomed at, or produces from, a point which lies seaward of the coastline. In general, the term "coastline" means the line of ordinary low water along that portion of the coast which is in direct contact with the open sea or the line marking the seaward limit of inland water. If a state agency uses a different basis for classifying onshore and offshore wells, the state classification is used.

OIL WELL—A well completed for the production of crude oil from at least one oil zone or reservoir.

PAD DISTRICTS (Petroleum Administration for Defense Districts)—a geographic aggregation of the 50 states and the District of Columbia into five districts, originally designed by the Petroleum Administration for Defense in 1950 for purposes of administration. These are an outgrowth of the World War II Petroleum Administration for War Districts.

PETROLEUM PRODUCTS—A generic term used to describe products obtained from distilling and processing crude oil, unfinished oils, natural gas liquids, blend stocks and other miscellaneous hydrocarbon compounds.

PETROLEUM REFINERY--A complex installation of equipment designed to manufacture finished petroleum products from crude oil and other liquid hydrocarbons.

PRIMARY STOCKS OF PETROLEUM--Represents stocks held at refineries, natural gas processing plants, bulk terminals, pipelines and leases. Primary stocks exclude those held in secondary and tertiary (consumer) storage.

PROCESSING GAIN—The volumetric amount by which total refinery output is greater than input. This difference is due to the processing of crude oil into products which, in total, have a lower specific gravity than the crude oil processed. Therefore, in terms of volume (barrels), the total output of products is greater than input.

PROCESSING LOSS—The volumetric amount by which total refinery output is less than input for a given period of time. This difference is due to the processing of crude oil into products which, in total, have a higher specific gravity than the crude oil processed and thus an output, in barrels, smaller than the input.

PRODUCT SUPPLIED FOR DOMESTIC USE—Approximately represents consumption of petroleum products in that it measures the disappearance of these products from primary sources, i.e., refineries, natural gas processing plants, blending operations, pipelines, and bulk terminals. It includes losses and fuels used in the industry.

RESIDUAL FUEL OIL—General classification for fuels obtained as liquid still bottoms from the distillation of crude, used alone or in blends with heavy liquids from other refinery process operations. Includes Grades No. 5 (light and heavy), No. 6 (including heady-grade, so-called Bunker C oil), and Navy Special fuel oil.

SERVICE WELL—A well drilled or completed for the purpose of supporting production in an existing field.

SELECTED DEFINITIONS

STRATEGIC PETROLEUM RESERVE (SPR)--Petroleum inventories (currently only crude oil) held in Government-owned underground storage for use during periods of supply interruptions.

STRATIGRAPHIC TEST--A drilling effort, geologically directed, to obtain information pertaining to a specific geological condition that might lead toward the discovery of an accumulation of hydrocarbons. Such wells are customarily drilled without the intention of being completed for hydrocarbon production. This classification also includes tests identified as core tests and all types of expendable holes related to hydrocarbon exploration.

UNFINISHED OILS--Includes all oils requiring further processing, i.e., any refinery operation except mechanical blending.

WELL—A hole drilled in the earth for the purpose of (1) finding or producing crude oil or natural gas; or (2) providing services related to the production of crude oil or natural gas.

BASIC PETROLEUM DATA BOOK

Petroleum Industry Statistics

Volume VII, Number 2
May 1987

American Petroleum Institute
1220 L Street, Northwest
Washington, D.C. 20005

The American Petroleum Institute, incorporated in 1919 under the laws of the District of Columbia, serves as a forum, information bureau, technical clearing house, and national trade association for the petroleum industry.

Beginning with Volume 1, Number 1, the Basic Petroleum Data Book will be updated three times a year. Each issue will be an independent newly-printed book which can be discarded when subsequent volumes are released. This format supersedes the original loose-leaf Data Book first printed in October 1975.

---

(1) Gross energy is that contained in all types of commercial energy at the time it is incorporated in the economy, whether the energy is produced domestically or imported. Gross energy comprises inputs of primary fuels (or their derivatives) and outputs of hydropower and nuclear power converted to theoretical energy inputs. Gross energy includes the energy used for the production, processing, and transportation of energy power.

(2) Includes anthracite, bituminous, lignite coal, and imported coke.

(3) Petroleum products including still gas, liquefied refinery gas, and natural gas liquids.

(4) Output of hydropower (adjusted for net imports or net exports) and nuclear power converted to theoretical energy inputs calculated from national average heat rates for fossil-fueled steam-electric plants provided by the Federal Power Commission.

---

(1) Includes anthracite, bituminous, and lignite coals.

(2) Includes bunkers and military transportation.

(3) Utility electricity, generated and imported, distributed on basis of historical series in the Edison Electric Institute Yearbook. Conversion of electricity to energy equivalent was made at the value of contained energy corresponding to 100-percent efficiency using a theoretical rate of 3,412 Btu per kilowatt-hour.

---

(1) Includes anthracite, bituminous, and lignite coals.

(2) Includes bunkers and military transportation.

(3) Utility electricity, generated and imported, distributed on basis of historical series in the Edison Electric Institute Yearbook. Conversion of electricity to energy equivalent was made at the value of contained energy corresponding to 100-percent efficiency using a theoretical rate of 3,412 Btu per kilowatt-hour.

(4) Total includes small amounts of imported coke.

(1) F95 denotes the 95th fractile; the probability of more than the amount F95 is 95% F5 is defined similarly.
(2) Includes quantities considered recoverable only if technology permits their ploitation beneath Artic pack ice--a condition not yet met.
(3) Does not include gas in storage.

---

(1) Prior to 1970, well data shown are for wells reported to the API for that year. Because the time span between the time wells were actually completed and when they were reported to the API began to grow significantly, the date of publication began to seriously lag the actual well-completion date. Hence, beginning in 1970, the statistics show the year in which the wells were completed regardless of the time frame in which they were reported to API.

* Included in state total.

(1) Includes service wells, stratigraphic and core tests.

(2) Northern Gulf of Mexico was a new area designated in 1972 by the Bureau of Land Management for federally controlled Outer Continental Shelf Waters not previously mapped or leased.

(3) Prior to 1970, well data shown are for wells reported to the API for that year. Because the time span between the time wells were actually completed and when they were reported to the API began to grow significantly, the date of publication began to seriously lag the actual well-completion date. Hence, beginning in 1970, the statistics show the year in which the wells were completed, regardless of the time frame in which they were reported to the API.

---

* Included in state total.

(1) Includes service wells, stratigraphic and core tests.

(2) Northern Gulf of Mexico was a new area designated in 1972 by the Bureau of Land Management for federally controlled Outer Continental Shelf Waters not previously mapped or leased.

(3) Alaska (offshore federal waters), Atlantic Coast and Pacific Coast were mapped and released by the Bureau of Land Management as of January 1, 1979.

Cities Service	125.2	Phillips	270.2	Phillips	269.7
Sun	114.1	Sun	258.8	Sun	206.1
Ohio Oil (Marathon)	104.8	Cities Service	202.7	Union	173.4
Union	102.9	Continental	188.0	Marathon	168.3
Atlantic Refining	97.7	Marathon	174.9	Cities Service	154.7
Tidewater	89.7	City of Long Beach(1)	163.5	Conoco	148.0
Amerada	80.9	Amerada Hess	95.7	Amerada Hess	88.3
Superior	79.7	Tenneco	87.0	Tenneco	79.2
Sunray Mid-Continent	71.2	Superior	65.2	City of Long Beach(1)	72.6
Skelly	69.0	Louisiana Land & Exploration	62.0	El Paso	72.3

(1) Long Beach, California owns several oil fields and a large percentage of the oil produced from these fields. It has contracts with Arco, Exxon, Mobil, Shell, Texaco, Unocal and others to develop the properties. Because the oil owned by Long Beach is not included in the contracted companies' net production figures, the city has been included as a separate incorporated municipality.

---

(1) Long Beach, California owns several oil fields and a large percentage of the oil produced from these fields. It has contracts with Arco, Exxon, Mobil, Shell, Texaco, Unocal and others to develop the properties. Because the oil owned by Long Beach is not included in the contracted companies' net production figures, the city has been included as a separate incorporated municipality.

(2) Texaco acquired Getty Oil Company on March 1, 1984. Texaco's figure includes 100% of Getty's estimated annualized production.

(3) Standard Oil of California acquired the Gulf Corporation on June 15, 1984, and on July 1, 1984 Standard changed its name to Chevron. Chevron's figure includes Gulf's 1984 full-year production.

(4) Mobil acquired Superior on September 28, 1984. Mobil's figure includes 100% of Superior's estimated annualized production.

(5) Phillips acquired Aminoil from R.J. Reynolds on October 26, 1984. Phillips' figure includes 100% of Aminoil's estimated annualized production.

(6) U.S. Steel acquired the U.S. assets of Husky Oil Ltd. on May 31, 1984. U.S. Steel's figure includes 100% of Husky's estimated annualized production of its U.S. assets.

Median	13.1	13.8

---

(1) Net income as a percent of average stockholders' equity

(2) Net income as a percent of average stockholders' equity. Calculations based on Standard & Poor's Compustat data base, All Industrial Aggregate excluding non-manufacturing (e.g., retail) and petroleum industry sectors. The median number of non-oil comopanies over the period was 747; the range was 694-820.

---

(1) Beginning in July, 1978, the CPI was given in two forms, CPI-U & CPI-W. The index used above is the CPI-U.
(2) Represented "Reading and Recreation" prior to July 1978.

---

(1) Regular grade gasoline--leaded and unleaded.
(2) Area is generally the SMSA. Los Angeles, Long Beach, Anaheim is a combination of two SMSA's and N.Y.-NE N.J. and Chicago-NW Ind. are the more extensive Standard Consolidated Areas.
(3) Regions are defined as the four Census Regions.

---

(1) Includes benzol, other hydrocarbons, and hydrogen.
(2) Represents the difference between supply and indicated demand for crude petroleum, first reported separately in 1968, prior years include adjustments where available.
(3) Beginning with 1960, processing gains are reported separately; prior years include adjustments to permit a balance between total new supply and total supply.
(4) Separate data not available prior to 1968.
(5) Data for this year and those for subsequent years are on a 50-state basis.

---

* Includes motor and aviation gasoline.

(3) U.S. Bureau of Mines altered its stock reporting base as of January 1975. On the new basis, year-end 1974 stocks were 228,262 thousand barrels.

(4) U.S. Department of Energy altered its stock reporting base as of January 1981. On the new basis, year-end 1980 stocks were 265,802 thousand barrels. This figure was used to compute the 1981 stock change.

(5) Includes blending components.

(6) Totals may not add due to independent rounding.

---

(1) Data prior to 1964 is not available on a comparable basis.

(2) U.S. Bureau of Mines altered its stock reporting as of January 1975. On the new basis, year-end 1974 stocks were 224,719 thousand barrels. This figure was used to compute the 1975 stock change.

(3) Totals do not add due to independent rounding.

(4) In 1981, the Department of Energy changed their methodology for calculating motor gasoline, distillate, and residual product supplies. Based on this raw methodology, API has reconstructed DOE data for 1978, 1979, and 1980. The stock reporting base was also altered as of January 1981. On the new basis, year-end 1980 stocks were 263,003 thousand barrels. This figure was used to compute the 1981 stock change.

(5) Includes motor gasoline blending components.

(1) In 1981, the Department of Energy changed their methodology for calculating motor gasoline, distillate, and residual product supplied. Based on this new methodology, API has reconstructed DOE data for 1978, 1979, and 1980.
(2) Totals may not add due to independent rounding.
(3) In 1983, DOE changed their methodology for calculating stocks. The 1983 stock change is based on DOE's revised stock figures for 1982.

---

(1) These figures and those for subsequent years are on a 50 state basis.

(2) U.S. Bureau of Mines altered its stock reporting base as of January 1975. On the new basis, year-end 1974 stocks were 74,939 thousand barrels. This figure was used to compute the 1975 stock change (Table 7a).

---

(1) In 1981, the Department of Energy changed their methodology for calculating motor gasoline, distillate and residual product supplied. Based on this new methodology, API has reconstructed DOE data for 1978, 1979, and 1980.
(2) In 1983, the Department of Energy changed their methodology for calculating stocks. The 1983 stock change is based on DOE's revised figure for 1982.
(3) Totals may not add due to independent rounding.

---

(5) Includes range oil
(6) Excludes oil company use
(7) Includes kerosine-type jet fuel: 1976 -- 11,600 bbls. per day; 1977 -- 18,770 bbls. per day; 1978 -- 12,342 bbls. per day.
(8) Includes imports by military
(9) Beginning in 1979, heating oils is no longer a separate category. The figure is derived by adding residential, commercial and farming.

(1) Beginning with 1967, represented use by electric public-utility plants only.
(2) Includes imports by military.
(3) Beginning in 1979, heating oil has been reclassified commercial and is a part of the total called "heating and industrial."

---

(1) Sales data represent net taxable gasoline gallonage sold in the U.S. by all petroleum marketers, including non-retail sales by suppliers, cooperatives, etc.

(2) Includes sales of subsidiaries BP Oil and Boron.

(3) Includes sales under the brand names of Douglas, Kayo and Onco.

(4) Includes sales of subsidiary Northwestern Refining Company.

(5) Includes all sales by Skelly Oil Company.

(6) Includes sales under the brand name Triangle.

(7) Unocal Corporation is the parent of Union Oil Company of California.

(8) Includes Cities Service. Southland acquired the refining, marketing and transportation sections of Citgo Petroleum Corp., a subsidiary of Occidental, on September 1, 1983.

(9) Diamond Shamrock acquired Sigmor in September 1983.

(10) Standard Oil of California acquired the Gulf Corporation on June 15, 1984 and on July 1, 1984, Standard changed its name to Chevron. Chevron's figure reflects this acquisition.

(11) Texaco acquired Getty Oil Company on March 1, 1984. Texaco's figures reflects this acquisition.

NOTE: Revenue = charges and/or collection--bonuses and first year rentals adjusted from book transfer dates (years) to Geological Survey from Bureau of Land Management, to actual sales dates. Distribution of escrow funds totaling $39,316,545 to the State of Louisiana and Lessees, pursuant to Supreme Court decree dated December 31, 1965, was not deducted from calendar year 1966 revenue charges, nor was the production value of $157 million deducted. 1970 bonuses increased $951,875 and rentals increased $22,500--leases on appeal validated.

* This column shows estimated seepage from the Santa Barbara blowout of January 28, 1969. Seepage following the blowout has been variously estimated at 10,000 to 71,500 barrels, but totals above do not include the first 10 days. The figure for 1972 includes seepage between February 7, 1969 and December 31,1972.

HISTORICAL DATA ON LEASING
CONTINENTAL SEABEDS ADJACENT TO THE UNITED STATES
(THOUSANDS OF SQUARE STATUTE MILES)

Region	State Lands(1)	OCS "Shelf" (Between State Limit and 200 Meter Depth)	Continental Slope (Between 200 and 2500 Meter Depths)	Total OCS
Hawaii	--	0.4(2)	3.6	4.0
Alaska	22.9	560.0	212.2	795.1
Pacific Coast States	4.5	15.0	76.2	95.7
Gulf Coast States	13.5	121.0	84.2	218.7
Atlantic Coast States	7.1	129.1	102.5	238.7
Total	48.0	825.5	478.7	1,352.2
		559[illegible]0,000Ac.	306,368,000 Ac.	865,408,000 Ac.

		Percent of OCS "Shelf"	Percent of Total OCS
TOTAL FEDERAL OCS ACREAGE EVER OFFERED FOR LEASE THROUGH 8/22/84	329,472,769	58.9	38.1
TOTAL FEDERAL OCS LEASED THROUGH 8/22/84	37,147,323	6.6	4.3
TOTAL FEDERAL OCS CURRENTLY UNDER LEASE 12/31/83(3)	18,500,000	3.3	2.1

---

(1) Areas within three nautical miles of coastline, except for Texas and Gulf Coast of Florida where the boundaries are three leagues (nine nautical miles) distant.

(2) Includes state areas.

(3) Approximate acreage figure is used because of constant company relinquishments of leases--approximately 200 leases relinquished each year.

N.A. Not Available
(1) Estimated.
(2) All native gas in storage reservoirs formerly classified as proved reserves of natural gas is included in this figure.
* Excludes gas loss due to natural gas liquids recovery.
(3) Figures include 26 trillion cubic feet in Prudhoe Bay, Alaska, (discovered in 1968).
(4) The net difference between gas stored in and gas withdrawn from underground storage reservoirs, inclusive of adjustments and native gas transferred from other reserve categories. (Adjustments include change of reporting basis starting in 1973 to report only gas reserves considered recoverable, in effect, reducing gas reserves by 1,024,140 MMCF that would have been reported since 1972 using former basis).

N.A. Not Available
(1) Estimated.
(3) Figures include 26 trillion cubic feet in Prudhoe Bay, Alaska.
(4) The net difference between gas stored in and gas withdrawn from underground storage reservoirs, inclusive of adjustments and native gas transferred from other reserve categories. (Adjustments include change of reporting basis starting in 1973 to report only gas reserves considered recoverable, in effect, reducing gas reserves by 1,024,140 MMCF that would have been reported since 1972 using former basis).

---

(1) Includes approximately 1 billion cubic feet of liquefied natural gas in 1970, 2 billion cubic feet in 1971, 0.2 billion cubic feet in 1972, 0.7 billion cubic feet in 1973, and 0.6 billion cubic feet in 1981.
(2) Less than one-half unit.
(3) Liquefied natural gas.

Pennzoil	144,329
Consolidated Natural Gas	126,600
Columbia	125,462(8)
Union Pacific	121,363
El Paso	107,000
U.S. TOTAL	17,231,000

(1) Reported on a "dry" gas basis unless otherwise noted.
(2) Sales. Texaco's figure also includes 100% of Getty Oil Company's estimated annualized production. (Texaco acquired Getty on March 1, 1984.)
(3) Standard Oil of California acquired the Gulf Corporation on June 15, 1984, and on July 1, 1984, Standard changed its name to Chevron. Chevron's figure includes 100% of Gulf's annualized production before the extraction of natural gas liquids.
(4) Mobil acquired Superior on September 23, 1984. Mobil's figure includes 100% of Superior's estimated annualized production.
(5) Phillips acquired Aminoil from R.J. Reynolds on October 26, 1984. Phillips' figure includes 100% of Aminoil's estimated annualized production.
(6) Volume before extraction of natural gas liquids.
(7) U.S. Steel acquired the U.S. assets of Husky Oil Ltd. on May 31, 1984. U.S. Steel's figure includes 100% of Husky's estimated annualized production of its U.S. assets.
(8) Includes synthetic gas and liquified petroleum gas.

---

(1) Original member 1960.
(2) Saudi Arabia and Kuwait share the production from the Neutral Zone on a 50-50 basis.
(3) Joined in 1961.
(4) Joined in 1962.
(5) Abu Dhabi joined in 1967. Figures reflect only Abu Dhabi reserves until 1974 when membership was transferred to the United Arab Emirates which includes Dubai and Sharjah.
(6) Joined in 1969.
(7) Joined in 1971.
(8) Joined in 1973.
(9) Joined as an associate member in 1973 and became a full member in 1975.
(10) Government estimate

(1) Original member 1960.
(2) In 1969, Saudi Arabia and Kuwait agreed to a boundary for administration of the Neutral Zone which had been in dispute until that time. Natural resources from the area were to be shared equally.
(3) Joined in 1961.
(4) Joined in 1962.
(5) Abu Dhabi joined in 1967. In 1972, Abu Dhabi together with Dubai, Sharjah and several other sheikdoms formed the United Arab Emirates. Abu Dhabi's membership in OPEC was transferred to the other members of the U.A.E. in 1974.
(6) Joined in 1969.
(7) Joined in 1971.
(8) Joined in 1973.
(9) Joined as an associate member in 1973 and became a full member in 1975.
(10) Less than 500 barrels per day.

---

(1) Original member 1960.
(2) In 1969, Saudi Arabia and Kuwait agreed to a boundary for administration of the Neutral Zone which had been in dispute until that time. Natural resources from the area were to be shared equally.
(3) Joined in 1961.
(4) Joined in 1962.
(5) Abu Dhabi joined in 1967. In 1972, Abu Dhabi together with Dubai, Sharjah and several other sheikdoms formed the United Arab Emirates. Abu Dhabi's membership in OPEC was transferred to the other members of the U.A.E. in 1974.
(6) Joined in 1969.
(7) Joined in 1971.
(8) Joined in 1973.
(9) Joined as an associate member in 1973 and became a full member in 1975.
(10) Includes crude oil imported into the Strategic Petroleum Reserve.

Section XV
Table 7

SELECTED DEFINITIONS

BARREL--unit of volumetric measure. One barrel equals 42 U.S. gallons.

CRUDE OIL--technically defined as a mixture of hydrocarbons that exists in the liquid phase in natural underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities.

CRUDE OIL, PRODUCTION--the volume of liquids statistically defined as crude oil, which is produced from oil reservoirs during given periods of time. The amount of such production for a given period is generally established by measurement of volumes delivered from lease storage tanks (i.e., the point of custody transfer) to pipelines, trucks, or other media for transport to refineries or terminals with adjustments for (1) net differences between opening and closing lease inventories, and (2) basic sediment and water (BS&W).

CRUDE OIL, PROVED RESERVES--Proved reserves of crude oil as of December 31 of any given year are the estimated quantities of all liquids statistically defined as crude oil, which geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions.

Reservoirs are considered proved if economic producibility is supported by either actual production or conclusive formation tests. The area of an oil reservoir considered proved includes: (1) that portion delineated by drilling and defined by gas-oil or oil-water contacts, if any; and (2) the immediately adjoining portions not yet drilled but which can be reasonably judged as economically productive on the basis of available geological and engineering data. In the absence of information on fluid contacts, the lowest known structural occurence of hydrocarbons controls the lower proved limit of the reservoir.

Reserves of crude oil which can be produced economically through application of improved recovery techniques (such as fluid injection) are included in the "proved" classification.

Estimates of proved crude oil reserves do not include the following: (1) oil that may become available from known reservoirs but is reported separately as "indicated additional reserves"; (2) natural gas liquids (including lease condensate); (3) oil the recovery of which is subject to reasonable doubt because of uncertainty as to geology, reservoir characteristics, or economic factors; (4) oil that may occur in untested prospects; and (5) oil that may be recovered from oil shales, coal, gilsonite, and other such sources.

DEVELOPMENT WELL--In general, a well drilled within the proved area of an oil or gas reservoir to the depth of a stratigraphic horizon known to be productive.

DISTILLATE FUEL OIL--A general classification for one or more distilled petroleum fractions used for domestic heating and industrial burners, or for power generation in compression-ignition engines. These fractions are No. 1 Fuel Oil, No. 2 Fuel Oil, Diesel Fuel and No. 4 Fuel Oil.

DRY HOLE--An exploratory or development well found to be incapable of producing either oil or gas in sufficient quantities to justify completion as an oil or gas well.

EXPLORATORY WELL--A well drilled (1) to find and produce oil or gas in an unproved area; (2) to find a new reservoir in a field previously found to be productive of oil or gas in another reservoir; or (3) to extend the limits of a known oil or gas reservoir.

GAS WELL--A well completed for production of natural gas from one or more gas zones or reservoirs. Such wells contain no completions for the production of crude oil.

KEROSINE--A refined petroleum distillate conforming to the requirements of ASTM D 3699. Two classifications are No. 1-K and No.2-K.

KEROSINE-TYPE JET FUEL (Jet A)--A quality kerosine product covered by ASTM Spec. D 1655. Used primarily as fuel for commercial turbojet and turboprop aircraft engines. A relatively low freezing point distillate of the kerosine type.

LIQUEFIED REFINERY GAS (LRG)--Includes liquefied refinery gases that were fractionated from refinery or still gases. Through compression and/or refrigeration they are retained in the liquid state and represent final products. Excludes still gases used for chemical or rubber manufacture which are reported as petrochemical feedstocks and also excludes liquefied gases ready for blending into gasoline which are reported as gasoline blending components. Liquefied refinery gases are reported in the following categories for use as petrochemical feedstock, for other uses or both: ethane and/or ethylene, propane and/or propylene, butane and/or butylene, butane-propane mixtures, and isobutane.

LUBRICATING OILS--Includes all grades of paraffinic and naphthenic lubricating oil stocks, from light distillate spindle oils to residual cylinder stocks. Oils used in grease-making are also classified as lubricating oils.

MOTOR GASOLINE--A complex mixture of relatively volatile hydrocarbons, with or without small quantities of additives, obtained by blending appropriate refinery streams to form a fuel suitable for use in spark ignition engines. Includes all refinery products within the gasoline range (ASTM Spec. D 439) that are to be marketed as motor gasoline without further processing, i.e., any refinery operation except mechanical blending. Includes both leaded and unleaded grades. Also includes finished components in the gasoline range which will be used for blending or compounding into finished gasoline.

SELECTED DEFINITIONS

NAPHTHA-TYPE JET FUEL--(Jet B) A fuel in the heavy naphtha boiling range covered by ASTM Spec. D 1655 and meeting military Spec. MIL-T-5624 (JP-4). Used for turbojet and turboprop aircraft engines, primarily by the military. Excludes ramjet and petroleum rocket fuels.

NATURAL GAS--A mixture of hydrocarbon compounds and small quantities of various non-hydrocarbons existing in the gaseous phase or in solution with oil in natural underground reservoirs at reservoir conditions. Natural gas may be subclassified as follows: Associated Gas, Dissolved Gas, and Non-associated Gas.

NATURAL GAS, PRODUCTION--Statistics pertaining to natural gas production represent volumes of gas produced from natural oil and gas reservoirs during given periods of time with adjustments (where applicable) to reflect (1) the volume of gas returned to natural reservoirs, and (2) the reduction of volume resulting from the removal of natural gas liquids and nonhydrocarbon gases. The volume of natural gas withdrawn from underground storage facilities is not included in natural gas production statistics.

NATURAL GAS, PROVED RESERVES--Proved reserves of natural gas as of December 31 of any given year are the estimated quantities of natural gas which geological and engineering data demonstrate with reasonable certainty to be recoverable in the future from known natural oil and gas reservoirs under existing economic and operating conditions.

Reservoirs are considered proved if economic producibility is supported by either actual production or conclusive formation tests. The area of a reservoir considered proved includes: (1) that portion delineated by drilling and defined by gas-oil, gas-water or oil-water contacts; and (2) the adjoining portions not yet drilled but which can be reasonably judged economically productive on the basis of available geological and engineering data. In the absence of information on fluid contacts, the lowest known structural occurrence of hydrocarbons controls the lower proved limit of the reservoir.

Reserve estimates are prepared for total recoverable natural gas, nonassociated gas, and associated-dissolved gas. Estimates do not include (1) gaseous equivalents of natural gas liquids expected to be recovered from reservoir natural gas as it is produced; (2) natural gas being held in underground storage; or (3) nonhydrocarbon gases.

NATURAL GAS LIQUIDS--Those portions of reservoir gas which are liquefied at the surface in lease separators, field facilities, or gas processing plants. Natural gas liquids include but are not limited to: ethane, propane, butanes, pentanes, natural gasoline, and condensate.

NEW-FIELD WILDCAT--A well located on a structural feature or other type of trap which has not previously produced oil or gas.

OFFSHORE--Term defined as that geographic area which lies seaward of the coastline. In general, the term "coastline" means the line of ordinary low water along that portion of the coast which is in direct contact with the open sea or the line marking seaward limit of inland water.

OFFSHORE WELL--A well which is bottomed at, or produces from, a point which lies seaward of the coastline. In general, the term "coastline" means the line of ordinary low water along that portion of the coast which is in direct contact with the open sea or the line marking the seaward limit of inland water. If a state agency uses a different basis for classifying onshore and offshore wells, the state classification is used.

OIL WELL--A well completed for the production of crude oil from at least one oil zone or reservoir.

PAD DISTRICTS (Petroleum Administration for Defense Districts)--a geographic aggregation of the 50 states and the District of Columbia into five districts, originally designed by the Petroleum Administration for Defense in 1950 for purposes of administration. These are an outgrowth of the World War II Petroleum Administration for War Districts.

PETROLEUM PRODUCTS--A generic term used to describe products obtained from distilling and processing crude oil, unfinished oils, natural gas liquids, blend stocks and other miscellaneous hydrocarbon compounds.

PETROLEUM REFINERY--A complex installation of equipment designed to manufacture finished petroleum products from crude oil and other liquid hydrocarbons.

PRIMARY STOCKS OF PETROLEUM--Represents stocks held at refineries, natural gas processing plants, bulk terminals, pipelines and leases. Primary stocks exclude those held in secondary and tertiary (consumer) storage.

PROCESSING GAIN--The volumetric amount by which total refinery output is greater than input. This difference is due to the processing of crude oil into products which, in total, have a lower specific gravity than the crude oil processed. Therefore, in terms of volume (barrels), the total output of products is greater than input.

PROCESSING LOSS--The volumetric amount by which total refinery output is less than input for a given period of time. This difference is due to the processing of crude oil into products which, in total, have a higher specific gravity than the crude oil processed and thus an output, in barrels, smaller than the input.

PRODUCT SUPPLIED FOR DOMESTIC USE--Approximately represents consumption of petroleum products in that it measures the disappearance of these products from primary sources, i.e., refineries, natural gas processing plants, blending operations, pipelines, and bulk terminals. It includes losses and fuels used in the industry.

RESIDUAL FUEL OIL--General classification for fuels obtained as liquid still bottoms from the distillation of crude, used alone or in blends with heavy liquids from other refinery process operations. Includes Grades No. 5 (light and heavy), No. 6 (including heady-grade, so-called Bunker C oil), and Navy Special fuel oil.

SERVICE WELL--A well drilled or completed for the purpose of supporting production in an existing field.

SELECTED DEFINITIONS

STRATEGIC PETROLEUM RESERVE (SPR)--Petroleum inventories (currently only crude oil) held in Government-owned underground storage for use during periods of supply interruptions.

STRATIGRAPHIC TEST--A drilling effort, geologically directed, to obtain information pertaining to a specific geological condition that might lead toward the discovery of an accumulation of hydrocarbons. Such wells are customarily drilled without the intention of being completed for hydrocarbon production. This classification also includes tests identified as core tests and all types of expendable holes related to hydrocarbon exploration.

UNFINISHED OILS--Includes all oils requiring further processing, i.e., any refinery operation except mechanical blending.

WELL--A hole drilled in the earth for the purpose of (1) finding or producing crude oil or natural gas; or (2) providing services related to the production of crude oil or natural gas.

BASIC PETROLEUM DATA BOOK

Petroleum Industry Statistics

Volume VII, Number 3
September 1987

American Petroleum Institute
1220 L Street, Northwest
Washington, D.C. 20005

The American Petroleum Institute, incorporated in 1919 under the laws of the District of Columbia, serves as a forum, information bureau, technical clearing house, and national trade association for the petroleum industry.

Beginning with Volume 1, Number 1, the Basic Petroleum Data Book will be updated three times a year. Each issue will be an independent newly-printed book which can be discarded when subsequent volumes are released. This format supersedes the original loose-leaf Data Book first printed in October 1975.

TABLE OF CONTENTS

SECTION I. ENERGY

SECTION II. CRUDE OIL RESERVES

SECTION III. EXPLORATION AND DRILLING

SECTION IV. PRODUCTION

SECTION V. FINANCIAL

SECTION VI. PRICES

SECTION VII. DEMAND

SECTION VIII. REFINING

SECTION IX. IMPORTS

SECTION X. EXPORTS

SECTION XI. OFFSHORE

SECTION XII. TRANSPORTATION

SECTION XIII. NATURAL GAS

SECTION XIV. OPEC

TABLE OF CONTENTS

SECTION I. ENERGY

Table 1. Annual & Projected Supply/Demand Summary of Total Energy in U.S.
Table 2. U.S. Consumption of Energy by Source & End-Use Sector--Actual & Projected
Table 3. U.S. Economic, Demographic & Energy Indicators
Table 4. U.S. Petroleum Supply/Disposition Balance--Actual and Projected
Table 5. U.S. Price of Energy by Source & End-Use Sector--Actual and Projected
Table 6. U.S. Gross Energy Consumption by Sources
Table 7. U.S. Production of Energy by Source
Table 8. U.S. Gross Energy Consumption by Sector
Table 9. U.S. Energy Input Demand to Industrial Sector
Table 10. U.S. Energy Input Demand to Household and Commercial Sector
Table 11. U.S. Energy Input Demand to Transportation
Table 12. U.S. Energy Input Demand to Utilities
Table 13. World Primary Energy Production
Table 14. World Coal Production

SECTION II. CRUDE OIL RESERVES

Table 1. Proved World Reserves of Crude Oil
Table 2. The Reserves of United States Crude Oil
Table 3. U.S. Proved Crude Oil Reserves by State
Table 4. Proved Crude Reserves -- Twenty Leading Nations
Table 5. USGS Estimates of U.S. Oil and Gas Reserves

SECTION III. EXPLORATION AND DRILLING

Table 1. Exploratory Wells and Footage Drilled in U.S.
Table 2. Development & Total Wells and Footage Drilled in U.S.
Table 3. U.S. Wells Drilled by Depth Interval
Table 4. U.S. Petroleum Geophysical Exploration
Table 5. Free World Geophysical Exploration
Table 6. Historical Record: New Field Oil Discoveries Proved to be of Significant Size
Table 7. Historical Record: New Field Gas Discoveries Proved to be of Significant Size
Table 8. Historical Record: New Field Oil & Gas Discoveries Proved to be of Significant Size
Table 9. U.S. Estimated Drilling Costs--Onshore
Table 10. U.S. Estimated Drilling Costs--Offshore
Table 11. U.S. Estimated Drilling Costs--All Wells
Table 12. Free World Total Well Completions
Table 13. Free World Total Exploratory Well Completions
Table 14. U.S. Annual Average Rotary Rig Activity by State
Table 15. U.S. Total Wells Reported as Completed by State
Table 16. Annual U.S. Rotary Rig Census
Table 17. Producing Gas and Condensate Wells, by State
Table 18. Producing Oil Wells, by State
Table 19. Producing Oil Wells in U.S. By State and Type
Table 20. U.S. Stripper Wells By State
Table 21. U.S. Stripper Well Abandonments By State
Table 22. Producing Oil and Gas Wells, Free World

SECTION IV. PRODUCTION

Table 1. World Crude Oil Production by Area
Table 2. World Crude Production -- Twenty Leading Nations
Table 3. U.S. Stripper Wells and Production
Table 4. U.S. Crude Production by State
Table 5. U.S. Stripper Well Production by State
Table 6. Oil Volume, Value and Revenues Received from Onshore Federal and Indian Lands
Table 7. Twenty Leading Companies -- U.S. Crude Oil, Condensate and Natural Gas Liquids Production
Table 8. U.S. Average Crude Oil Production Per Well Per Day by State

SECTION V. FINANCIAL

Table 1. Average Hourly Earnings: Mining and Manufacturing vs. Oil and Gas Production and Refining
Table 2. Number of Employees: Oil and Gas Extraction and Refining
Table 3. Sources of Capital of a Group of Petroleum Companies
Table 4. Net Income as a Percent of Net Worth: Petroleum vs. Other Industries
Table 5. Domestic and Foreign Net Income of a Group of Petroleum Companies
Table 6. World Petroleum Industry Capital and Exploration Expenditures
Table 7. Sources and Uses of Working Capital of a Group of Petroleum Companies
Table 8. Domestic and Foreign Capital Expenditures of the World Petroleum Industry
Table 9. Estimated U.S. Exploration and Development Expenditures
Table 10. U.S. Estimated Expenditures for Exploration, Development and Production
Table 11. Environmental Protection Expenditures of the Petroleum Industry within the U.S.
Table 12. Summary Financial Data for Twenty-Four Leading U.S. Oil Companies
Table 13. Capital Expenditures of Twenty-Four Leading U.S. Oil Companies
Table 14. Net Income as a Percent of Stockholder's Equity--Oil and Non-Oil Companies
Table 15. Windfall Profits Tax
Table 16. U.S. Merchandise Trade Value
Table 17. Oil Finding and Development Costs

SECTION VI. PRICES

Table 1. Average Annual Wellhead Price of U.S. Crude
Table 2. Average Annual Wellhead Price of U.S. Natural Gas
Table 3. Refiner Acquisition Cost of Crude Oil
Table 4. Trend of Wholesale Prices of Commodities Used in Petroleum Production
Table 5. Trends of Regular Grade Gasoline Prices vs. Prices of Other Consumer Goods and Services
Table 6. U.S. Annual Average Retail Price for Number 2 Home Heating Oil
Table 7. Total Dollar Value of Crude Oil and Natural Gas at the Wellhead
Table 8. U.S. Average Wellhead Value Per Barrel of Crude by State
Table 9. U.S. Average Wellhead Value of Natural Gas by State
Table 10. Posted Prices of Key Foreign Crudes
Table 11. Official Government Selling Prices of Key Foreign Crudes
Table 12. Average U.S. Retail Gasoline Prices for Selected Cities
Table 13. Average Price of Natural Gas Consumed by End Use Sector
Table 14. Spot Prices for Selected World Crude Oils

SECTION VII. DEMAND

Table 1. Estimated World Demand for Refined Petroleum Products by Area
Table 2. Total U.S. Supply and Demand for All Oils
Table 3. U.S. Supply and Demand for Total Gasoline
Table 4. Total U.S. Supply and Demand for Motor Gasoline
Table 5. Total U.S. Supply and Demand for Distillate Fuel Oil
Table 6. Total U.S. Supply and Demand for Residual Fuel Oil
Table 7. Sales of Distillate and Residual Fuel Oils to Electric Utilities
Table 8. Motor Gasoline Consumption in the U.S.
Table 9. U.S. Sales of Distillate Fuel Oil by State
Table 10. U.S. Sales of Distillate Fuel Oil by Uses
Table 11. U.S. Sales of Residual Fuel Oil by State
Table 12. U.S. Sales of Residual Fuel Oil by Uses
Table 13. Total U.S. Supply and Demand for Naphtha Type Jet Fuel
Table 14. Total U.S. Supply and Demand for Kerosine Type Jet Fuel
Table 15. Total U.S. Supply and Demand for Kerosine
Table 16. Total U.S. Supply and Demand for Natural Gas Liquids and Liquefied Refinery Gases
Table 17. Total U.S. Supply and Demand for Lubricants
Table 18. Total U.S. Supply and Demand for "Other Oils"
Table 19. U.S. Crude Oil Stocks
Table 20. Twenty Leading Companies -- Motor Gasoline Sales

SECTION VIII. REFINING

Table 1. Estimated Worldwide Crude Oil Refining Capacity by Area
Table 2. Worldwide Crude Oil Refinery Runs
Table 3. World Refinery Output by Area for Major Petroleum Products
Table 4. U.S. Crude Oil Refining Capacity
Table 5. Percentage Yields of Refined Petroleum Products from Crude Oil in the U.S.
Table 6. U.S. Crude Oil Refinery Runs by PAD District -- Foreign vs. Domestic

Table 1

ANNUAL SUPPLY/DISPOSITION SUMMARY OF TOTAL ENERGY IN THE U.S.**
(Quadrillion BTU)

SUPPLY/DISPOSITION	1980	1985	1987	1988	1989	1990	1995	2000
Production								
Crude Oil and Lease Condensate	18.2	19.0	18.3	17.6	16.7	15.7	12.7	11.5
NGPL's	2.3	2.2	2.2	2.4	2.3	2.4	2.3	2.2
Natural Gas(1)	20.1	17.1	16.9	17.7	17.2	17.5	17.3	16.7
Coal(2)	18.6	19.3	20.1	20.9	21.1	21.5	24.5	26.4
Nuclear	2.7	4.2	4.9	5.4	5.7	6.0	6.4	6.7
Hydropower/Other(3)	3.0	3.1	3.4	3.1	3.1	3.1	3.2	3.2
Total Production	64.9	64.9	65.8	67.1	66.2	66.2	66.4	66.8
Imports								
Crude Oil(4)	11.2	6.8	8.7	9.2	10.0	11.1	14.2	16.3
Petroleum Prod.(5)	3.5	3.8	4.1	3.9	3.9	4.0	4.7	5.9
Natural Gas(6)	1.0	0.9	0.9	0.6	1.0	1.0	1.8	2.4
Other Imports(7)	0.3	0.5	0.5	0.5	0.6	0.6	0.7	0.9
Total Imports	15.9	12.0	14.2	14.2	15.6	16.8	21.3	25.4
Exports								
Coal	2.4	2.4	2.3	2.4	2.4	2.5	2.7	2.9
Crude Oil and Petroleum Prod.	1.2	1.7	1.6	1.6	1.6	1.6	1.6	1.6
Other(8)	0.1	NA	NA	NA	NA	NA	NA	NA
Total Exports	3.6	4.1	3.9	4.0	4.0	4.1	4.3	4.5
Net Stock Withdrawals	-0.8	1.0	0	-0.2	-0.1	-0.2	-0.2	-0.2
Adjustments(9)	-0.4	0.2	-0.1	-0.1	-0.1	-0.1	-0.1	-0.1
Consumption								
Petroleum Products(10)	34.2	30.9	32.2	31.7	31.7	31.8	32.6	34.7
Natural Gas	20.4	17.9	17.4	17.9	17.8	18.1	18.6	18.5
Coal	15.4	17.5	17.8	18.5	18.7	19.1	21.7	23.6
Nuclear	2.7	4.2	4.9	5.4	5.7	6.0	6.4	6.7
Hydroelectric/Other(11)	3.2	3.5	3.8	3.5	3.6	3.6	3.8	3.9
Total Consumption	76.0	73.9	76.1	77.0	77.5	78.6	83.1	87.3

** Base Case Forecast: Economy is assumed to maintain an average growth of 2.5 percent through 2000 and real world oil prices, expressed in 1986 dollars, remain below $20 until 1992; thereafter, increasing world oil demand begins to absorb the current excess of world supply, and oil prices rise at a faster rate, reaching $33 by the year 2000. Data for 1980 and 1985 are actual.

(1) Net dry marketed production after removal of nonhydrocarbon gases, plus supplemental natural gas.

(2) Historical coal production includes anthracite, bituminous, and lignite. Projected coal production (1986-2000) includes bituminous and lignite, with anthracite included in bituminous.

(3) Includes hydropower, geothermal power, and wood waste.

(4) Includes imports of crude oil for the Strategic Petroleum Reserve.

(5) Includes imports of unfinished oils and natural gas plant liquids.

(6) Includes dry natural gas imports from Canada and Mexico, and liquefied natural gas imports from Algeria. In both the historical and forecast periods, natural gas imports are net imports.

(7) Includes electricity, coal and coal coke imports.

(8) Includes electricity and coal coke exports. Gas exports are not included.

(9) Balancing item that includes stock changes, gains, losses, miscellaneous blending components, unaccounted for supply, anthracite shipped overseas to U.S. Armed Forces, and certain secondary stock withdrawals.

(10) Includes natural gas plant liquids and crude oil consumed as a fuel.

(11) Includes industrial generation of hydroelectric power, net electricity imports, and electricity produced from geothermal, wood, waste, wind, photovoltaic, solar thermal sources connected to electric utility distribution systems. Also includes coke imports.

** Base Case Forecast: Economy is assumed to maintain an everage growth of 2.5 percent through 2000 and real world oil prices, expressed in 1986 dollars, remain below $20 until 1992; thereafter, increasing world oil demand begins to absorb the current excess of world supply, and oil prices rise at a faster rate, reaching $33 by the year 2000. Data for 1980 and 1985 are actual.

(1) Includes kerosene and steam coal.

(2) Includes deliveries to municipalities and other public authorities for institutional heating, street lighting, etc.

(3) Includes kerosene, liquefied petroleum gas and steam coal.

(4) Includes all fuels consumed for heat and power, including natural gas used as lease and plant fuel and for industrial feedstock and raw material uses; also, all fuels consumed by refineries.

(6) Includes lease and plant fuel of natural gas.

(7) Includes kerosene, still gas used in refineries, other raw material oil, and net coke imports. Other raw material oil consists of asphalt, special naphthas, lubricants, waxes, petroleum coke, road oil and small amounts of other petroleum and net blending oil.

(9) Consists of natural gas used as pipeline compressor fuel.

(10) Includes aviation gasoline, liquefied petroleum gas, lubricants and waxes, steam coal and electricity.

(11) Includes renewable facilities such as hydropower, geothermal power, wood, waste, solar power and wind power.

Data for 1980 and 1985 are actual.

(1) The cost of imported crude oil to U.S. refiners in 1986 dollars per barrel.

(3) Other domestic prior to 1981 includes unfinished oils (net), hydrogen, and hydrocarbons not included elsewhere. After 1981, other domestic includes unfinished oils (net), motor gasoline blending components (net), aviation gasoline blending components (net), hydrogen, other hydrocarbons, alcohol, and synthetic crude production.

(4) Represents volumetric gain in refinery distillation and cracking processes.

(9) Includes naphtha and kerosene type.

(10) Includes aviation gasoline, kerosene, liquefied petroleum gas, petrochemical feedstocks, miscellaneous petroleum products, lubricants, waxes, unfractionated stream, plant condensate, natural gasoline, asphalt, road oil, still gas, special naphthas, and petroleum coke.

---

(1) Gross energy is that contained in all types of commercial energy at the time it is incorporated in the economy, whether the energy is produced domestically or imported. Gross energy comprises inputs of primary fuels (or their derivatives) and outputs of hydropower and nuclear power converted to theoretical energy inputs. Gross energy includes the energy used for the production, processing, and transportation of energy power.

(2) Includes anthracite, bituminous, lignite coal, and imported coke.

(3) Petroleum products including still gas, liquefied refinery gas, and natural gas liquids.

(4) Output of hydropower (adjusted for net imports or net exports) and nuclear power converted to theoretical energy inputs calculated from national average heat rates for fossil-fueled steam-electric plants provided by the Federal Power Commission.

---

(1) Gross energy is that contained in all types of commercial energy at the time it is incorporated in the economy, whether the energy is produced domestically or imported. Gross energy comprises inputs of primary fuels (or their derivatives) and outputs of hydropower and nuclear power converted to theoretical energy inputs. Gross energy includes the energy used for the production, processing, and transportation of energy power.

(2) Includes anthracite, bituminous, lignite coal, and imported coke.

(3) Petroleum products including still gas, liquefied refinery gas, and natural gas liquids.

(4) Output of hydropower (adjusted for net imports or net exports) and nuclear power converted to theoretical energy inputs calculated from national average heat rates for fossil-fueled steam-electric plants provided by the Federal Power Commission.

(5) Figures do not total due to omission of geothermal power and electricity produced from wood and waste.

---

(1) Includes anthracite, bituminous, and lignite coals.
(2) Includes bunkers and military transportation.
(3) Utility electricity, generated and imported, distributed on basis of historical series in the Edison Electric Institute Yearbook. Conversion of electricity to energy equivalent was made at the value of contained energy corresponding to 100-percent efficiency using a theoretical rate of 3,412 Btu per kilowatt-hour.

---

(1) Includes anthracite, bituminous, and lignite coals.
(2) Includes net inputs and negligible amount of hydropower generated by industrial establishments.
(3) Total includes small amounts of geothermal power and electricity from wood and waste.

(1) F95 denotes the 95th fractile; the probability of more than the amount F95 is 95% F5 is defined similarly.

(2) Includes quantities considered recoverable only if technology permits their ploitation beneath Artic pack ice--a condition not yet met.

(3) Does not include gas in storage.

---

(1) Prior to 1970, well data shown are for wells reported to the API for that year. Because the time span between the time wells were actually completed and when they were reported to the API began to grow significantly, the date of publication began to seriously lag the actual well-completion date. Hence, beginning in 1970, the statistics show the year in which the wells were completed regardless of the time frame in which they were reported to API.

---

(1) The number of development wells for 1961-1965 was obtained by deducting the total number of exploratory wells reported by the AAPG from the total number of wells reported by the Oil and Gas Journal.

(2) Footage not available prior to 1966.

(3) Prior to 1970, well data shown are for wells reported to the API for that year. Because the time span between the time wells were actually completed and when they were reported to the API began to grow significantly, the date of publication began to seriously lag the actual well-completion date. Hence, beginning in 1970, the statistics show the year in which the wells were completed regardless of the time frame in which they were reported to API.

* Included in state total.

(1) Includes service wells, stratigraphic and core tests.

(2) Northern Gulf of Mexico was a new area designated in 1972 by the Bureau of Land Management for federally controlled Outer Continental Shelf Waters not previously mapped or leased.

(3) Prior to 1970, well data shown are for wells reported to the API for that year. Because the time span between the time wells were actually completed and when they were reported to the API began to grow significantly, the date of publication began to seriously lag the actual well-completion date. Hence, beginning in 1970, the statistics show the year in which the wells were completed, regardless of the time frame in which they were reported to the API.

Sunray Mid-Continent	71.2	Superior	65.2	City of Long Beach(1)	72.6
Skelly	69.0	Louisiana Land & Exploration	62.0	El Paso	72.3

---

(1) Long Beach, California owns several oil fields and a large percentage of the oil produced from these fields. It has contracts with Arco, Exxon, Mobil, Shell, Texaco, Unocal and others to develop the properties. Because the oil owned by Long Beach is not included in the contracted companies' net production figures, the city has been included as a separate incorporated municipality.

---

(1) Long Beach, California owns several oil fields and a large percentage of the oil produced from these fields. It has contracts with Arco, Exxon, Mobil, Shell, Texaco, Unocal and others to develop the properties. Because the oil owned by Long Beach is not included in the contracted companies' net production figures, the city has been included as a separate incorporated municipality.

(2) Texaco acquired Getty Oil Company on March 1, 1984. Texaco's figure includes 100% of Getty's estimated annualized production.

(3) Standard Oil of California acquired the Gulf Corporation on June 15, 1984, and on July 1, 1984 Standard changed its name to Chevron. Chevron's figure includes Gulf's 1984 full-year production.

(4) Mobil acquired Superior on September 28, 1984. Mobil's figure includes 100% of Superior's estimated annualized production.

(5) Phillips acquired Aminoil from R.J. Reynolds on October 26, 1984. Phillips' figure includes 100% of Aminoil's estimated annualized production.

(6) U.S. Steel acquired the U.S. assets of Husky Oil Ltd. on May 31, 1984. U.S. Steel's figure includes 100% of Husky's estimated annualized production of its U.S. assets.

1982	13.1	9.8
1983	12.4	12.2
1984	11.1	15.0
Median	13.1	13.8

(1) Net income as a percent of average stockholders' equity

(2) Net income as a percent of average stockholders' equity. Calculations based on Standard & Poor's Compustat data base, All Industrial Aggregate excluding non-manufacturing (e.g., retail) and petroleum industry sectors. The median number of non-oil comopanies over the period was 747; the range was 694-820.

---

(1) Includes benzol, other hydrocarbons, and hydrogen.
(2) Represents the difference between supply and indicated demand for crude petroleum, first reported separately in 1968, prior years include adjustments where available.
(3) Beginning with 1960, processing gains are reported separately; prior years include adjustments to permit a balance between total new supply and total supply.
(4) Separate data not available prior to 1968.
(5) Data for this year and those for subsequent years are on a 50-state basis.

---

(1) Data prior to 1964 is not available on a comparable basis.

(2) U.S. Bureau of Mines altered its stock reporting as of January 1975. On the new basis, year-end 1974 stocks were 224,719 thousand barrels. This figure was used to compute the 1975 stock change.

(3) Totals do not add due to independent rounding.

(4) In 1981, the Department of Energy changed their methodology for calculating motor gasoline, distillate, and residual product supplies. Based on this raw methodology, API has reconstructed DOE data for 1978, 1979, and 1980. The stock reporting base was also altered as of January 1981. On the new basis, year-end 1980 stocks were 263,003 thousand barrels. This figure was used to compute the 1981 stock change.

(5) Includes motor gasoline blending components.

(1) These figures and those for subsequent years are on a 50-state basis.
(2) Production and stocks at gas processing plants are included in this and subsequent years.
(3) U.S. Bureau of Mines altered its stock reporting base as of January 1975. On the new basis, year-end 1974 stocks were 223,717 thousand barrels. This figure was used to compute the 1975 stock change (Table 5a).

(1) In 1981, the Department of Energy changed their methodology for calculating motor gasoline, distillate, and residual product supplied. Based on this new methodology, API has reconstructed DOE data for 1978, 1979, and 1980.

(2) Totals may not add due to independent rounding.

(3) In 1983, DOE changed their methodology for calculating stocks. The 1983 stock change is based on DOE's revised stock figures for 1982.

(5) Includes range oil
(6) Excludes oil company use
(7) Includes kerosine-type jet fuel: 1976 -- 11,600 bbls. per day; 1977 -- 18,770 bbls. per day; 1978 -- 12,342 bbls. per day.
(8) Includes imports by military
(9) Beginning in 1979, heating oils is no longer a separate category. The figure is derived by adding residential, commercial and farming.

(1) Beginning with 1967, represented use by electric public-utility plants only.
(2) Includes imports by military.
(3) Beginning in 1979, heating oil has been reclassified commercial and is a part of the total called "heating and industrial."

(1) The U.S. Department of Energy altered its stock reporting base as of January 1981. On the new basis, year-end 1980 stocks were 146,145 thousand barrels. This figure was used to compute the 1981 stock change.
(2) Total demand excludes volume used as refinery inputs.
(3) Totals may not add due to independent rounding.

(1) Sales data represent net taxable gasoline gallonage sold in the U.S. by all petroleum marketers, including non-retail sales by suppliers, cooperatives, etc.
(2) Includes sales of subsidiaries BP Oil and Boron.
(3) Includes sales under the brand names of Douglas, Kayo and Onco.
(4) Includes sales of subsidiary Northwestern Refining Company.
(5) Includes all sales by Skelly Oil Company.
(6) Includes sales under the brand name Triangle.
(7) Unocal Corporation is the parent of Union Oil Company of California.
(8) Includes Cities Service. Southland acquired the refining, marketing and transportation sections of Citgo Petroleum Corp., a subsidiary of Occidental, on September 1, 1983.
(9) Diamond Shamrock acquired Sigmor in September 1983.
(10) Standard Oil of California acquired the Gulf Corporation on June 15, 1984 and on July 1, 1984, Standard changed its name to Chevron. Chevron's figure reflects this acquisition.
(11) Texaco acquired Getty Oil Company on March 1, 1984. Texaco's figures reflects this acquisition.

Table 20a

TWENTY LEADING COMPANIES
MOTOR GASOLINE SALES(1)
(Millions of Gallons)

1985	
Company	Production
Chevron	8,399.5
Amoco (Standard of Indiana)	8,085.3
Shell	7,694.6
Exxon	7,472.0
Texaco	7,026.9
Mobil	6,485.4
Atlantic Richfield	4,305.2
Union	3,941.1
Standard Oil (Ohio)(2)	3,799.4
Phillips	3,180.7
Sun	2,659.8
Southland	2,500.1
U.S. Steel	2,480.7
DuPont	2,067.7
Ashland	1,697.7
American Petrofina	978.7
Diamond Shamrock	973.9
Tenneco	887.0
Total Petroleum	739.9
Tosco	721.2

(1) This data represents net taxable gallonage sold in the U.S. by all petroleum marketers, including non-retail sales by suppliers, cooperataives, etc.

(2) Because they are under common control, sales for Standard of Ohio and BP are combined.

NOTE: Revenue = charges and/or collection--bonuses and first year rentals adjusted from book transfer dates (years) to Geological Survey from Bureau of Land Management, to actual sales dates. Distribution of escrow funds totaling $39,316,545 to the State of Louisiana and Lessees, pursuant to Supreme Court decree dated December 31, 1965, was not deducted from calendar year 1966 revenue charges, nor was the production value of $157 million deducted. 1970 bonuses increased $951,875 and rentals increased $22,500--leases on appeal validated.

* This column shows estimated seepage from the Santa Barbara blowout of January 28, 1969. Seepage following the blowout has been variously estimated at 10,000 to 71,500 barrels, but totals above do not include the first 10 days. The figure for 1972 includes seepage between February 7, 1969 and December 31, 1972.

		559,040,000Ac.	306,368,000 Ac.	865,408,000 Ac.

		Percent of OCS "Shelf"	Percent of Total OCS
TOTAL FEDERAL OCS ACREAGE EVER OFFERED FOR LEASE THROUGH 8/22/84	329,472,769	58.9	38.1
TOTAL FEDERAL OCS LEASED THROUGH 8/22/84	37,147,323	6.6	4.3
TOTAL FEDERAL OCS CURRENTLY UNDER LEASE 12/31/83(3)	18,500,000	3.3	2.1

---

(1) Areas within three nautical miles of coastline, except for Texas and Gulf Coast of Florida where the boundaries are three leagues (nine nautical miles) distant.

(2) Includes state areas.

(3) Approximate acreage figure is used because of constant company relinquishments of leases--approximately 200 leases relinquished each year.

N.A. Not Available
(1) Estimated.
(2) All native gas in storage reservoirs formerly classified as proved reserves of natural gas is included in this figure.
* Excludes gas loss due to natural gas liquids recovery.
(3) Figures include 26 trillion cubic feet in Prudhoe Bay, Alaska, (discovered in 1968).
(4) The net difference between gas stored in and gas withdrawn from underground storage reservoirs, inclusive of adjustments and native gas transferred from other reserve categories. (Adjustments include change of reporting basis starting in 1973 to report only gas reserves considered recoverable, in effect, reducing gas reserves by 1,024,140 MMCF that would have been reported since 1972 using former basis).

---

(1) Includes approximately 1 billion cubic feet of liquefied natural gas in 1970, 2 billion cubic feet in 1971, 0.2 billion cubic feet in 1972, 0.7 billion cubic feet in 1973, and 0.6 billion cubic feet in 1981.
(2) Less than one-half unit.
(3) Liquefied natural gas.

Total World	58,747.7	Total World	58,397.7	Total World	55,682.6

(1) Comprises all gas collected and utilized as a fuel or as a chemical industry raw material, including gas used in oil and/or gas fields as a fuel by producers, even though it is not actually sold.
(2) United States is reported marketed production; all others may include some gross production.

U.S. TOTAL	17,231,000	U.S. TOTAL	16,428,000

---

(1) Reported on a "dry" gas basis unless otherwise noted.

(2) Sales. Texaco's figure also includes 100% of Getty Oil Company's estimated annualized production. (Texaco acquired Getty on March 1, 1984.)

(3) Standard Oil of California acquired the Gulf Corporation on June 15, 1984, and on July 1, 1984, Standard changed its name to Chevron. Chevron's figure includes 100% of Gulf's annualized production before the extraction of natural gas liquids.

(4) Mobil acquired Superior on September 23, 1984. Mobil's figure includes 100% of Superior's estimated annualized production.

(5) Phillips acquired Aminoil from R.J. Reynolds on October 26, 1984. Phillips' figure includes 100% of Aminoil's estimated annualized production.

(6) Volume before extraction of natural gas liquids.

(7) U.S. Steel acquired the U.S. assets of Husky Oil Ltd. on May 31, 1984. U.S. Steel's figure includes 100% of Husky's estimated annualized production of its U.S. assets.

(8) Includes synthetic gas and liquified petroleum gas.

(9) Formerly HNG/InterNorth, Inc. On June 1, 1985 InterNorth Inc. acquired the Houston Natural Gas Corporation and changed its name to reflect the acquisition. By April 1986 the corporation changed its name to Enron Corporation. Enron's figure includes Houston Natural Gas's 1985 full-year production. Enron's figure also includes cost and non-cost of service production.

---

(1) Original member 1960.
(2) Saudi Arabia and Kuwait share the production from the Neutral Zone on a 50-50 basis.
(3) Joined in 1961.
(4) Joined in 1962.
(5) Abu Dhabi joined in 1967. Figures reflect only Abu Dhabi reserves until 1974 when membership was transferred to the United Arab Emirates which includes Dubai and Sharjah.
(6) Joined in 1969.
(7) Joined in 1971.
(8) Joined in 1973.
(9) Joined as an associate member in 1973 and became a full member in 1975.
(10) Government estimate

---

(1) Original member 1960.
(2) Saudi Arabia and Kuwait share the production from the Neutral Zone on a 50-50 basis.
(3) Joined in 1961.
(4) Joined in 1962.
(5) Abu Dhabi joined in 1967. Figures reflect only Abu Dhabi production until 1974 when membership was transferred to the United Arab Emirates which includes Dubai and Sharjah.
(6) Joined in 1969.
(7) Joined in 1971.
(8) Joined in 1973.
(9) Joined as an associate member in 1973 and became a full member in 1975.

SELECTED DEFINITIONS

BARREL--unit of volumetric measure. One barrel equals 42 U.S. gallons.

CRUDE OIL--technically defined as a mixture of hydrocarbons that exists in the liquid phase in natural underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities.

CRUDE OIL, PRODUCTION--the volume of liquids statistically defined as crude oil, which is produced from oil reservoirs during given periods of time. The amount of such production for a given period is generally established by measurement of volumes delivered from lease storage tanks (i.e., the point of custody transfer) to pipelines, trucks, or other media for transport to refineries or terminals with adjustments for (1) net differences between opening and closing lease inventories, and (2) basic sediment and water (BS&W).

CRUDE OIL, PROVED RESERVES--Proved reserves of crude oil as of December 31 of any given year are the estimated quantities of all liquids statistically defined as crude oil, which geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions.

Reservoirs are considered proved if economic producibility is supported by either actual production or conclusive formation tests. The area of an oil reservoir considered proved includes: (1) that portion delineated by drilling and defined by gas-oil or oil-water contacts, if any; and (2) the immediately adjoining portions not yet drilled but which can be reasonably judged as economically productive on the basis of available geological and engineering data. In the absence of information on fluid contacts, the lowest known structural occurence of hydrocarbons controls the lower proved limit of the reservoir.

Reserves of crude oil which can be produced economically through application of improved recovery techniques (such as fluid injection) are included in the "proved" classification.

Estimates of proved crude oil reserves do not include the following: (1) oil that may become available from known reservoirs but is reported separately as "indicated additional reserves"; (2) natural gas liquids (including lease condensate); (3) oil the recovery of which is subject to reasonable doubt because of uncertainty as to geology, reservoir characteristics, or economic factors; (4) oil that may occur in untested prospects; and (5) oil that may be recovered from oil shales, coal, gilsonite, and other such sources.

DEVELOPMENT WELL--In general, a well drilled within the proved area of an oil or gas reservoir to the depth of a stratigraphic horizon known to be productive.

DISTILLATE FUEL OIL--A general classification for one or more distilled petroleum fractions used for domestic heating and industrial burners, or for power generation in compression-ignition engines. These fractions are No. 1 Fuel Oil, No. 2 Fuel Oil, Diesel Fuel and No. 4 Fuel Oil.

DRY HOLE--An exploratory or development well found to be incapable of producing either oil or gas in sufficient quantities to justify completion as an oil or gas well.

EXPLORATORY WELL--A well drilled (1) to find and produce oil or gas in an unproved area; (2) to find a new reservoir in a field previously found to be productive of oil or gas in another reservoir; or (3) to extend the limits of a known oil or gas reservoir.

GAS WELL--A well completed for production of natural gas from one or more gas zones or reservoirs. Such wells contain no completions for the production of crude oil.

KEROSINE--A refined petroleum distillate conforming to the requirements of ASTM D 3699. Two classifications are No. 1-K and No.2-K.

KEROSINE-TYPE JET FUEL (Jet A)--A quality kerosine product covered by ASTM Spec. D 1655. Used primarily as fuel for commercial turbojet and turboprop aircraft engines. A relatively low freezing point distillate of the kerosine type.

LIQUEFIED REFINERY GAS (LRG)--Includes liquefied refinery gases that were fractionated from refinery or still gases. Through compression and/or refrigeration they are retained in the liquid state and represent final products. Excludes still gases used for chemical or rubber manufacture which are reported as petrochemical feedstocks and also excludes liquefied gases ready for blending into gasoline which are reported as gasoline blending components. Liquefied refinery gases are reported in the following categories for use as petrochemical feedstock, for other uses or both: ethane and/or ethylene, propane and/ or propylene, butane and/or butylene, butane-propane mixtures, and isobutane.

LUBRICATING OILS--Includes all grades of paraffinic and naphthenic lubricating oil stocks, from light distillate spindle oils to residual cylinder stocks. Oils used in grease-making are also classified as lubricating oils.

MOTOR GASOLINE--A complex mixture of relatively volatile hydrocarbons, with or without small quantities of additives, obtained by blending appropriate refinery streams to form a fuel suitable for use in spark ignition engines. Includes all refinery products within the gasoline range (ASTM Spec. D 439) that are to be marketed as motor gasoline without further processing, i.e., any refinery operation except mechanical blending. Includes both leaded and unleaded grades. Also includes finished components in the gasoline range which will be used for blending or compounding into finished gasoline.

SELECTED DEFINITIONS

NAPHTHA-TYPE JET FUEL--(Jet B) A fuel in the heavy naphtha boiling range covered by ASTM Spec. D 1655 and meeting military Spec. MIL-T-5624 (JP-4). Used for turbojet and turboprop aircraft engines, primarily by the military. Excludes ramjet and petroleum rocket fuels.

NATURAL GAS--A mixture of hydrocarbon compounds and small quantities of various non-hydrocarbons existing in the gaseous phase or in solution with oil in natural underground reservoirs at reservoir conditions. Natural gas may be subclassified as follows: Associated Gas, Dissolved Gas, and Non-associated Gas.

NATURAL GAS, PRODUCTION--Statistics pertaining to natural gas production represent volumes of gas produced from natural oil and gas reservoirs during given periods of time with adjustments (where applicable) to reflect (1) the volume of gas returned to natural reservoirs, and (2) the reduction of volume resulting from the removal of natural gas liquids and nonhydrocarbon gases. The volume of natural gas withdrawn from underground storage facilities is not included in natural gas production statistics.

NATURAL GAS, PROVED RESERVES--Proved reserves of natural gas as of December 31 of any given year are the estimated quantities of natural gas which geological and engineering data demonstrate with reasonable certainty to be recoverable in the future from known natural oil and gas reservoirs under existing economic and operating conditions.

Reservoirs are considered proved if economic producibility is supported by either actual production or conclusive formation tests. The area of a reservoir considered proved includes: (1) that portion delineated by drilling and defined by gas-oil, gas-water or oil-water contacts; and (2) the adjoining portions not yet drilled but which can be reasonably judged economically productive on the basis of available geological and engineering data. In the absence of information on fluid contacts, the lowest known structural occurrence of hydrocarbons controls the lower proved limit of the reservoir.

Reserve estimates are prepared for total recoverable natural gas, nonassociated gas, and associated-dissolved gas. Estimates do not include (1) gaseous equivalents of natural gas liquids expected to be recovered from reservoir natural gas as it is produced; (2) natural gas being held in underground storage; or (3) nonhydrocarbon gases.

NATURAL GAS LIQUIDS--Those portions of reservoir gas which are liquefied at the surface in lease separators, field facilities, or gas processing plants. Natural gas liquids include but are not limited to: ethane, propane, butanes, pentanes, natural gasoline, and condensate.

NEW-FIELD WILDCAT--A well located on a structural feature or other type of trap which has not previously produced oil or gas.

OFFSHORE--Term defined as that geographic area which lies seaward of the coastline. In general, the term "coastline" means the line of ordinary low water along that portion of the coast which is in direct contact with the open sea or the line marking seaward limit of inland water.

OFFSHORE WELL--A well which is bottomed at, or produces from, a point which lies seaward of the coastline. In general, the term "coastline" means the line of ordinary low water along that portion of the coast which is in direct contact with the open sea or the line marking the seaward limit of inland water. If a state agency uses a different basis for classifying onshore and offshore wells, the state classification is used.

OIL WELL--A well completed for the production of crude oil from at least one oil zone or reservoir.

PAD DISTRICTS (Petroleum Administration for Defense Districts)--a geographic aggregation of the 50 states and the District of Columbia into five districts, originally designed by the Petroleum Administration for Defense in 1950 for purposes of administration. These are an outgrowth of the World War II Petroleum Administration for War Districts.

PETROLEUM PRODUCTS--A generic term used to describe products obtained from distilling and processing crude oil, unfinished oils, natural gas liquids, blend stocks and other miscellaneous hydrocarbon compounds.

PETROLEUM REFINERY--A complex installation of equipment designed to manufacture finished petroleum products from crude oil and other liquid hydrocarbons.

PRIMARY STOCKS OF PETROLEUM--Represents stocks held at refineries, natural gas processing plants, bulk terminals, pipelines and leases. Primary stocks exclude those held in secondary and tertiary (consumer) storage.

PROCESSING GAIN--The volumetric amount by which total refinery output is greater than input. This difference is due to the processing of crude oil into products which, in total, have a lower specific gravity than the crude oil processed. Therefore, in terms of volume (barrels), the total output of products is greater than input.

PROCESSING LOSS--The volumetric amount by which total refinery output is less than input for a given period of time. This difference is due to the processing of crude oil into products which, in total, have a higher specific gravity than the crude oil processed and thus an output, in barrels, smaller than the input.

PRODUCT SUPPLIED FOR DOMESTIC USE--Approximately represents consumption of petroleum products in that it measures the disappearance of these products from primary sources, i.e., refineries, natural gas processing plants, blending operations, pipelines, and bulk terminals. It includes losses and fuels used in the industry.

RESIDUAL FUEL OIL--General classification for fuels obtained as liquid still bottoms from the distillation of crude, used alone or in blends with heavy liquids from other refinery process operations. Includes Grades No. 5 (light and heavy), No. 6 (including heady-grade, so-called Bunker C oil), and Navy Special fuel oil.

SERVICE WELL--A well drilled or completed for the purpose of supporting production in an existing field.

SELECTED DEFINITIONS

STRATEGIC PETROLEUM RESERVE (SPR)--Petroleum inventories (currently only crude oil) held in Government-owned underground storage for use during periods of supply interruptions.

STRATIGRAPHIC TEST--A drilling effort, geologically directed, to obtain information pertaining to a specific geological condition that might lead toward the discovery of an accumulation of hydrocarbons. Such wells are customarily drilled without the intention of being completed for hydrocarbon production. This classification also includes tests identified as core tests and all types of expendable holes related to hydrocarbon exploration.

UNFINISHED OILS--Includes all oils requiring further processing, i.e., any refinery operation except mechanical blending.

WELL--A hole drilled in the earth for the purpose of (1) finding or producing crude oil or natural gas; or (2) providing services related to the production of crude oil or natural gas.
